

# **ROCK CLIP**

## **Description**

Rock Clips are tools designed to support drywall while it is being nailed in place in an elevated location. It is made of stainless steel construction and comes in sets of two.

Rock Clips are screwed into the frame base. The drywall rests on the Rock Clip's ledge while the drywaller is nailing it in place. This eliminates the need for the drywaller to hold an elevated piece of drywall while trying to nail it to a frame.

Rock Clips are designed to make hanging drywall in arches and elevated areas fast and easy.

## **Selling Features**

- Fast and easy way to hang elevated drywall
- Eliminates the need to support and nail drywall at the same time
- Saves installer time and money
- Made of stainless steel construction
- Easily attaches to frame base
- Comes in sets of two

## **Primary Uses**

- Fast and easy hanging of drywall in arched areas
- Hanging drywall in elevated locations

## **Advantages/Benefits**

- Saves installer time and money
- Fast and easy way to hang elevated drywall
- Easily attaches to a frame base
- Stainless steel construction
- Comes in convenient sets of two

## **Instructions**

1. Screw or nail Rock Clips to the base of the frame. They should be spaced to provide support for bottom of drywall with the ledge facing outward.
2. Rest drywall on the ledges of the Rock Clips and name the drywall into place.
3. Remove Rock Clips from the frame base.
