

Sheer Curtain: Measurement, Assembly & Installation Guide

1. Measurement (Before Purchase & Installation)

1.1 Curtain Rod Measurement

- **Rod Length:** Measure the total width of your window frame first. Then add an appropriate extra length on both sides. This extra length allows the sheer curtain to fully cover the window when closed, block light effectively, and create a spacious and elegant visual effect.
- **Rod Height:** Install the rod above the window frame at a suitable height. A moderate height can achieve a classic and modern look, while a higher installation position (even close to the ceiling) can visually elongate the wall, suitable for spaces with high ceilings.
- **Rod Projection:** Ensure the rod extends a proper distance away from the wall. This prevents the sheer curtain from rubbing against the wall or window, ensuring smooth opening and closing without obstruction.

1.2 Curtain Size Calculation

- **Curtain Width:** The total width of the sheer curtain panels should be 1.5 to 2.5 times the width of the window or curtain rod. This ratio can create a full, gathered and flowing appearance, avoiding the curtain looking flat and shapeless.
- **Curtain Length:** Choose the appropriate length according to your needs and decorative style:
 - **Floor-length:** Measure from the bottom of the curtain rod to the floor, and adjust slightly to avoid the curtain dragging on the ground and causing wear.
 - **Sill-length:** Measure from the rod to a position slightly below the window sill for a neat and concise look.
 - **Puddle effect:** Add an appropriate length on the basis of the floor-length measurement to create a soft, draped and luxurious effect on the floor.

2. Assembly (Curtain Rod & Hardware)

2.1 Tools & Materials Needed

Curtain rod set (including rod, brackets, end finials, screws and wall anchors), pencil, tape measure, level, drill (or screwdriver), stud finder (optional), ladder (for high-position

installation).

2.2 Assembly Steps

1. **Unpack and Inspect:** Carefully check all components in the curtain rod set for damage or missing parts to ensure smooth assembly.
2. **Attach Finials:** Install the decorative end finials onto both ends of the curtain rod, ensuring they are firmly fixed and not easy to fall off.
3. **Test Fit:** Slide the sheer curtain panels onto the rod through the top grommets or eyelets, and check whether the curtain can move smoothly along the rod without jamming.
4. **Mark Bracket Positions:** Hold the rod at the pre-determined height, use a level to ensure it is completely horizontal, and mark the positions of the screw holes of the two brackets with a pencil. It is recommended to use a stud finder to locate wall studs for more stable installation; if there is no stud, use wall anchors to enhance firmness.
5. **Prep Holes:** Drill pilot holes at the marked positions. For drywall, insert wall anchors into the holes to ensure the screws can be firmly fixed.
6. **Mount Brackets:** Screw the brackets into the wall or wall anchors firmly, and double-check that the brackets are level and stable to avoid the rod shaking or falling.

3. Installation (Hanging the Sheer Curtain)

3.1 Hanging Steps

1. **Thread the Curtain:** Slide the sheer curtain panels onto the rod through the top grommets or eyelets, and distribute the panels evenly along the rod to ensure a uniform gathered effect.
2. **Secure the Rod:** Place the rod with the curtain into the mounted brackets, and confirm that the rod is firmly locked in the brackets according to the rod's design requirements.
3. **Adjust & Straighten:** Gently pull the curtain panels to make the fabric distribute evenly, forming a smooth and beautiful gathered shape. Adjust the rod if necessary to ensure it remains horizontal.
4. **Final Check:** Test the opening and closing of the curtain to ensure it moves smoothly without snagging. Check the length of the curtain again to ensure it meets the expected effect and there is no obvious deviation.

4. Pro Tips

- **Layered Look:** Pair the sheer curtain with an opaque blackout curtain on a double rod to achieve better light control and privacy. Hang the sheer curtain on the inner rod, closer to the window.

- **Maintenance:** Clean the sheer curtain according to the fabric's washing instructions, usually by gentle machine washing and air drying to avoid shrinkage or damage. Iron at a low temperature if there are wrinkles.
- **Light & Privacy:** The sheer curtain can effectively filter natural light, bringing soft light into the room while ensuring daytime privacy. For nighttime privacy, it is recommended to match it with a blackout curtain or add a liner.
- **Grommet Care:** The grommets on the sheer curtain are designed for durability, but avoid pulling the curtain roughly to prevent the grommets from falling off or being damaged.

5. Safety Notes

- For drywall installation, always use appropriate wall anchors to ensure the curtain rod is firmly fixed and prevent it from falling and causing safety hazards.
- Hang the sheer curtain away from heat sources (such as heaters, candles) to avoid fire risks caused by high temperature.
- If the curtain is equipped with cords, keep the cords out of the reach of children to prevent strangulation accidents.
