

UNFINISHED ACACIA

Congratulations on purchasing a Kitchen Butcher Block Countertop, the best valued butcher block product on the market today! With the proper treatment it will look great for years to come.

Acacia is known for its ease of sanding, finishing, and clean look with a beautiful contrast of heartwood and sapwood.

This Acacia wood top comes unfinished and will look good for a long time with proper maintenance.

As a product of nature it will display characteristics that are unique to each piece.

USE & CARE INSTRUCTIONS:

- The butcher block **MUST** be sealed or finished on all surfaces within **24-48 HOURS** of removing shrink wrap. If unable to treat in that time and the shrink wrap has been removed, lay the butcher block flat on the floor away from heat sources and cover with a blanket or plastic.
- When sealing with mineral oil or conditioner, apply an even, liberal coat of conditioner on all surfaces and let absorb for approximately 20 minutes. Wipe off any excess with clean towel. Re-apply as necessary.
- If you are staining your block, we recommend Hardwood Reflections stain and clear top-coat. Make sure to stain before using any other finishing product.
- There are several other options for finishing your butcher block – please see a paint sales specialist for more information.
- If you notice any grain raise with oil or other sealants, you can lightly sand the top with fine grit sand paper.
- General use and cleaning of this top will require frequent application of conditioner or mineral oil to extend the life of the product. Frequency may range from every few weeks to every few months.
- If finished properly, this surface can be used for food prep; however, we recommend that a cutting board or mat be used to preserve the life and look of the block.
- Always clean your work top surface before and after each use.
