FlowXtreme Cotton Tails

Installation & Maintenance

- » Disconnect the filter pump from the power source
- » Open the filter container according to the instructions
- » Replace the existing filter cartridge with Aqualoon ATX
- » Close the filter container according to the instructions
- » Turn on the filter pump

Can be used as a substitute for most filter cartridges with a diameter of approximately 4.13 inch (10.5cm) and a height of approximately 7.87 inch (20cm)

Frequently Asked Questions

Questions:	Answers:
Can I use Cotton Tails in any sand filter?	Yes, Cotton Tails will work with all sand tanks
Can I mix Cotton Tails with Sand or Glass media?	No, the Sand or Glass will damage the Cotton Tails
Can I put pea gravel under the laterals in Hayward tanks?	Yes, it is recommended and will prevent possible damage to the laterals
Why can't I use a Clarifier with Cotton Tails?	Clarifiers will cause Cotton Tails to become hard and will no longer filter properly. This condition could result in damage to your filter tanks internal components. See the Yellow paper for further details
Can I use Enzyme additives with Cotton Tails?	Yes, adding Enzyme will keep Cotton Tails fresher
Can I mix White, Blue & Black Cotton Tails?	Yes, Blue & Black Cotton Tails will give added benefits You only backwash
When should I backwash Cotton Tails?	when the pressure gauge shows PSI over 25 Lbs
How do I clean Cotton Tails?	Remove Cotton Tails from the filter tank, rinse off the worst of the dirt and debris, place in a mesh laundry bag, wash in your clothes washer, allow to dry and return to the filter tank
Can I place Cotton Tails in my skimmer or pump basket?	Yes, we recommend this use for all filter types, not just for sand filters
Can I use the Cotton Tails ATX in filters other than Intex?	Yes, Cotton Tails ATX can replace most 4" diameter cartridges

Attention Blue Wave customers who have purchased FlowXtreme Cotton Tails.

Please advise your customers that pool water clarifiers or other chemical additives that bond to particulate matter for the purpose of improved filtration must not be used if Cotton Tails is the filtration media for their pool. This is the same warning or instruction that is commonly given for pools where Diatomaceous Earth is the filtration media.

Like Diatomaceous Earth, Cotton Tails filters down to a very small particle size, 3 microns. Therefore, the addition of a clarifier will not improve the effectiveness of Cotton Tails. The clarifier or a similar chemical additive is likely to cause damage to the Cotton Tails resulting in significant reduction in the filtration capability. In addition, possible damage to the filtration tank or its internal components may occur.

Blue Wave will not be responsible for damage caused to the Cotton Tails, the filtration tank or any of the internal components of the filtration tank where a clarifier or other chemical additives that bond to particulate matter have been used in the pool.
