

For best results: Stabilize sprinkler by placing the spike end of sprinkler firmly into the ground where you would like to have the 4 pattern turbo rotary sprinkler provide hydration. Select pattern by twisting top knob into place at the selected option as indicated by a white triangle marking the appropriate pattern.

Attach a standard 5/8" hose to your outdoor faucet and the other end to the open threaded section near the bottom of the sprinkler head. Screw the hose gently into the sprinkler until you have tightened it suitably by hand. Turn on faucet until desired pressure and distance of up to 68' in diameter is reached.
