VENT FREE GAS LOG SET
Owner’s Operation and Installation Manual
Also Design Certified As Vented Decorative Appliances

WARNING: If the information in this manual is not followed exactly, a fire or explosion may result causing property damage, personal injury, or loss of life.

— Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

— WHAT TO DO IF YOU SMELL GAS
  • Do not try to light any appliance.
  • Do not touch any electrical switch; do not use any phone in your building.
  • Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions.
  • If you cannot reach your gas supplier, call the fire department.

— Installation and service must be performed by a qualified installer, service agency, or the gas supplier.

INSTALLER: Leave this manual with the appliance.
CONSUMER: Retain this manual for future reference.

This appliance has been tested and approved under ANSI Z21.11.2—2011 Unvented Gas-Fired Room Heaters.

WARNING: This appliance is for installation only in a solid fuel burning masonry or UL127 factory-built fireplace or listed ventless firebox enclosure. It has been design certified for these installations. EXCEPTION: DO NOT install this appliance in a factory-built fireplace that includes instruction stating it has not been tested or should not be used with unvented gas logs.

This appliance may be installed in an aftermarket,* permanently located, manufactured (mobile) home, where not prohibited by local codes.

This appliance is only for use with the type of gas indicated on the rating plate. This appliance is not convertible for use with other gases.

* Aftermarket: Completion of sale, not for purpose of resale, from the manufacturer

Remote Control Included

## SAFETY INFORMATION

You must operate this heater with the fireplace screen in place. Make sure the fireplace screen is in place before running this appliance.

Unless other provisions are made for combustion air, the screens shall have an opening or openings for introduction of combustion air into the fireplace.

If this appliance is installed in a fireplace that has glass doors, the doors must be left open when the appliance is in use.

**WARNING:** Improper installation, adjustment, alteration, service, or maintenance can cause injury or property damage. Refer to this manual for correct installation and operational procedures. For assistance or additional information consult a qualified installer, service agency, or the gas supplier.

**WARNING:** This product contains and/or generates chemicals known to the state of California to cause cancer or birth defects or other reproductive harm.

**DANGER:** Carbon monoxide poisoning may lead to death!

**Carbon Monoxide Poisoning:** Early signs of carbon monoxide poisoning resemble the flu, with headaches, dizziness, and/or nausea. If you have these signs, heater may not be working properly. Get fresh air at once! Have heater serviced. Some people—pregnant women, persons with heart or lung disease, anemia, those under the influence of alcohol, those at high altitudes—are more affected by carbon monoxide than others.

**Propane/LP Gas:** Propane/LP gas is odorless. An odor-making agent is added to the gas. The odor helps you detect a gas leak. However, the odor added to the gas can fade. Gas may be present even though no odor exists.

Make certain you read and understand all warnings. Keep this manual for reference. It is your guide to safe and proper operation of this appliance.

**WARNING:** Any change to this heater or its controls can be dangerous.

**WARNING:** Do not use a blower insert, heat exchanger insert, or other accessory not approved for use with this appliance.

**WARNING:** Do not allow fans to blow directly into the appliance. Avoid any drafts that alter burner flame patterns. Ceiling fans can create drafts that alter burner flame patterns. Altered burner patterns can cause sooting.

Due to high temperatures, the appliance should be located out of traffic and away from furniture and draperies.

Do not place clothing or other flammable material on or near the appliance. Never place any objects on the heater.

Fireplace front and screen become very hot when running appliance. Keep children and adults away from hot surfaces to avoid burns or clothing ignition. Logs will remain hot for a time after shutdown. Allow surfaces to cool before touching.

Carefully supervise young children when they are in the room with fireplace.
1. This appliance is only for use with the type of gas indicated on the rating plate. This appliance is not convertible for use with other gases.

2. Do not place propane/LP supply tank(s) inside any structure. Locate propane/LP supply tank(s) outdoors (propane/LP units only).

3. If you smell gas
   • shut off gas supply
   • do not try to light any appliance
   • do not touch any electrical switch; do not use any phone in your building
   • immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions
   • if you cannot reach your gas supplier, call the fire department

4. This appliance shall not be installed in a bedroom or bathroom.

5. Do not use this appliance as a wood-burning fireplace. Use only the logs provided with the appliance.

6. Do not add extra logs or ornaments such as pine cones, vermiculite or rock wool. Using these added items can cause sooting and poor combustion. Do not add lava rock around base. Rock and debris could fall into the control area of heater.

7. This appliance is designed to be smokeless. If logs ever appear to smoke, turn off appliance and call a qualified service person. Note: During initial operation, slight smoking could occur due to log curing and fireplace burning manufacturing residues.

8. To prevent the creation of soot, follow the instructions in Cleaning and Maintenance section.

Keep the appliance area clear and free from combustible materials, gasoline and other flammable vapors and liquids.

9. Before using furniture polish, wax, carpet cleaner, or similar products, turn heater off. If heated, the vapors from these products may create a white powder residue within burner box or on adjacent walls or furniture.

10. This appliance needs fresh air ventilation to run properly. This appliance has an Oxygen Depletion Sensing (ODS) safety shutoff system. The ODS shuts down the fireplace if not enough fresh air is available. See Air for Combustion and Ventilation, pages 4 through 6. If appliance keeps shutting off, see Troubleshooting, pages 17 through 20.

11. Do not run appliance
   • where flammable liquids or vapors are used or stored
   • under dusty conditions

12. Do not use this appliance to cook food or burn paper or other objects.

13. Never place any objects in the heater or on logs.

14. Do not use appliance if any part has been exposed to or under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.

15. Turn appliance off and let cool before servicing. Only a qualified service person should service and repair appliance.

16. Operating appliance above elevations of 4,500 feet could cause pilot outage.

17. To prevent performance problems, do not use propane/LP fuel tanks of less than 100 lbs. capacity.

18. Provide adequate clearances around air openings.

LOCAL CODES

Install and use appliance with care. Follow all local codes. In the absence of local codes, use the latest edition of The National Fuel Gas Code ANSI Z223.1/NFPA 54*.

*Available from:
  American National Standards Institute, Inc.
  1430 Broadway
  New York, NY 10018
  National Fire Protection Association, Inc.
  Batterymarch Park
  Quincy, MA 02269

State of Massachusetts: The installation must be made by a licensed plumber or gas fitter in the Commonwealth of Massachusetts.

Sellers of unvented propane or natural gas-fired supplemental room heaters shall provide to each purchaser a copy of 527 CMR 30 upon sale of the unit.

Vent-free gas products are prohibited for bedroom and bathroom installation in the Commonwealth of Massachusetts.
UNPACKING
1. Remove the carton and log wrap.
2. Remove all protective packaging applied to heater for shipment.
3. Make sure your logset includes one hardware packet.
4. Check heater for any shipping damage. If heater is damaged, call SHM International at (800) 229-5647 for replacement parts before returning to dealer.

PRODUCT FEATURES

SAFETY PILOT
This heater has a pilot with an Oxygen Depletion Sensing (ODS) safety shutoff system. The ODS/pilot is a required feature for vent-free room heaters. The ODS/pilot shuts off the heater if there is not enough fresh air.

PIEZO IGNITION SYSTEM
This heater has a piezo ignitor. This system requires no matches, batteries or other sources to light heater.

THERMOSTATIC HEAT CONTROL
Thermostat-controlled models have a thermostat sensing bulb and a control valve. The thermostat will automatically modulate the heat output to maintain a consistent room temperature. This results in greater heater comfort. This can also result in lower gas bills.

AIR FOR COMBUSTION AND VENTILATION

WARNING: This heater shall not be installed in a room or space unless the required volume of indoor combustion air is provided by the method described in the National Fuel Gas Code, ANSI Z223.1/ NFPA 54, the International Fuel Gas Code, or applicable local codes.

Read the following instructions to insure proper fresh air for this and other fuel-burning appliances in your home.

Today’s homes are built more energy efficient than ever. New materials, increased insulation, and new construction methods help reduce heat loss in homes. Home owners weather strip and caulk around windows and doors to keep the cold air out and the warm air in. During heating months, home owners want their homes as airtight as possible.

While it is good to make your home energy efficient, your home needs to breathe. Fresh air must enter your home. All fuel-burning appliances need fresh air for proper combustion and ventilation.

Exhaust fans, fireplaces, clothes dryers, and fuel burning appliances draw air from the house to operate. You must provide adequate fresh air for these appliances. This will insure proper venting of vented fuel-burning appliances.

QUALIFIED INSTALLATION AGENCY

Installation and replacement of gas piping, gas utilization equipment or accessories and repair and servicing of equipment shall be performed only by a qualified agency. The term “qualified agency” means any individual, firm, corporation, or company that either in person or through a representative is engaged in and is responsible for:

A. Installation, testing or replacements of gas piping or

B. Connection, installation, testing, repair or servicing of equipment that is experienced in such work; that is familiar with all precautions required; and that has complied with all requirement of the authority having jurisdiction.

PROVIDING ADEQUATE VENTILATION

The following are excerpts from National Fuel Gas Code ANSI Z223.1/NFPA 54, Section 5.3, Air for Combustion and Ventilation.

All spaces in homes fall into one of the following ventilation classifications:

1. Unusually Tight Construction
2. Unconfined Space

The information on pages 4 through 6 will help you classify your space and provide adequate ventilation.
Unusually Tight Construction

The air that leaks around doors and windows may provide enough fresh air for combustion and ventilation. However, in buildings of unusually tight construction, you must provide additional fresh air.

Unusually tight construction is defined as construction where:

a. walls and ceilings exposed to the outside atmosphere have a continuous water vapor retarder with a rating of one perm (6 x 10^{-11} kg per pa-sec-m^2) or less with openings gasketed or sealed and

b. weather stripping has been added on openable windows and doors and

c. caulking or sealants are applied to areas such as joints around window and door frames, between sole plates and floors, between wall-ceiling joints, between wall panels, at penetrations for plumbing, electrical, and gas lines, and at other openings.

If your home meets all of the three criteria above, you must provide additional fresh air. See Ventilation Air From Outdoors, page 5.

If your home does not meet all of the three criteria above, proceed to Determining Fresh-Air Flow for Appliance Location, page 6.

VENTILATION AIR

Ventilation Air From Inside Building

This fresh air would come from an adjoining unconfined space. When ventilating to an adjoining unconfined space, you must provide two permanent openings: one within 12" of the ceiling and one within 12" of the floor on the wall connecting the two spaces (see Figure 1). You can also remove door into adjoining room (see Figure 1). Follow the National Fuel Gas Code ANSI Z223.1/NFPA 54, Section 5.3, Air for Combustion and Ventilation for required size of ventilation grills or ducts.

Ventilation Air From Outdoors

Provide extra fresh air by using ventilation grills or ducts. You must provide two permanent openings: one within 12" of the ceiling and one within 12" of the floor. Connect these items directly to the outdoors or spaces open to the outdoors. These spaces include attics and crawl spaces. Follow the National Fuel Gas Code ANSI Z223.1/NFPA 54, Section 5.3, Air for Combustion and Ventilation for required size of ventilation grills or ducts.

IMPORTANT: Do not provide openings for inlet or outlet air into attic if attic has a thermostat-controlled power vent. Heated air entering the attic will activate the power vent.

Figure 1 - Ventilation Air from Inside Building

Figure 2 - Ventilation Air from Outdoors

DETERMINING FRESH-AIR FLOW FOR APPLIANCE LOCATION

Determining if You Have a Confined or Unconfined Space

Use this work sheet to determine if you have a confined or unconfined space.

Space:  Includes the room in which you will install appliance plus any adjoining rooms with doorless passageways or ventilation grills between the rooms.

1. Determine the volume of the space (length x width x height).

Length x Width x Height = cu. ft. (volume of space)

Example:  Space size 22 ft. (length) x 18 ft. (width) x 8 ft. (ceiling height) = 3168 cu. ft. (volume of space)

If additional ventilation to adjoining room is supplied with grills or openings, add the volume of these rooms to the total volume of the space.

2. Multiply the space volume by 20 to determine the maximum Btu/Hr the space can support.

_______ (volume of space) x 20 = (Maximum Btu/Hr the space can support)

Example:  3168 cu. ft. (volume of space) x 20 = 63,360 (maximum Btu/Hr the space can support)
AIR FOR COMBUSTION AND VENTILATION
CONTINUED

3. Add the Btu/Hr of all fuel burning appliances in the space.

Vent-free log set ___________ Btu/Hr
Gas water heater* ___________ Btu/Hr
Gas furnace ___________ Btu/Hr
Vented gas heater ___________ Btu/Hr
Gas fireplace logs ___________ Btu/Hr
Other gas appliances* + ________ Btu/Hr
Total = ________ Btu/Hr

* Do not include direct-vent gas appliances. Direct-vent draws combustion air from the outdoors and vents to the outdoors.

Example:
Vent-free log set 39,000 Btu/Hr
Gas water heater* 40,000 Btu/Hr
Total = 79,000 Btu/Hr

4. Compare the maximum Btu/Hr the space can support with the actual amount of Btu/Hr used.

_____ Btu/Hr (max. the space can support)
_____ Btu/Hr (actual amt. of Btu/Hr used)

Example: 63,300 Btu/Hr (maximum the space can support)
73,000 Btu/Hr (actual amount of Btu/Hr used)

The space in the above example is a confined space because the actual Btu/Hr used is more than the maximum Btu/Hr the space can support. You must provide additional fresh air. Your options are as follows:

A. Rework work sheet, adding the space of an adjoining room.
   If the extra space provides an unconfined space, remove door to adjoining room or add ventilation grills between rooms. See Ventilation Air from Inside Building, page 5.
B. Vent room directly to the outdoors. See Ventilation Air from Outdoors, page 5.
C. Install a lower Btu/Hr appliance, if lower Btu/Hr size makes room unconfined.

If the actual Btu/Hr used is less than the maximum Btu/Hr the space can support, the space is an unconfined space. You will need no additional fresh air ventilation.

Note: When used as a vented heater, appliance must be installed only in a solid-fuel burning fireplace with a working flue and constructed of noncombustible material.

VENTED OPERATION

You may also use this heater as a vented product. There are three reasons for operating your heater in the vented mode.

1. The fireplace does not meet the clearance to combustibles requirements for vent-free operation.
2. State or local codes do not permit vent-free operation.
3. You prefer vented operation.

If reasons number 1 or 2 above apply to you, you must permanently open chimney flue damper. You must install the damper clamp. This will insure vented operation (see Figure 10). The damper clamp will keep damper open. See chart below for minimum permanent flue opening you must provide. Attach damper clamp so the minimum permanent flue opening will be maintained at all times.

Follow instructions INSTALLING DAMPER Clamp on page
**INSTALLATION**

**WARNING:** Before installing in a solid-fuel-burning fireplace, the chimney flue and firebox must be cleaned of soot, creosote, ashes, and loose paint by a qualified chimney cleaner.

**NOTICE:** This appliance is intended for supplemental heating. Use this heater along with your primary heating system. Do not install this heater as your primary heat source. If you have a central heating system, you may run system's circulating blower while using heater. This will help circulate the heat throughout the house. In the event of a power outage, you can use this heater as your primary heat source.

**WARNING:** A qualified service person must install appliance. Follow all local codes.

**WARNING:** Never install the appliance
- in a recreational vehicle
- where curtains, furniture, clothing, or other flammable objects are less than 36 inches (91.5 cm) from the front, top, or sides of the appliance
- in a wood-burning stove
- in high traffic areas
- in windy or drafty areas

**WARNING:** Never install in a bedroom or bathroom. Any heating product with a Btu/Hr rating over 10,000 cannot be used in a bedroom. Any heating product with a Btu/Hr rating over 6,000 cannot be used in a bathroom.

**CAUTION:** This appliance creates warm air currents. These currents move heat to wall surfaces next to appliance. Installing appliance next to vinyl or cloth wall coverings or operating appliance where impurities (such as tobacco smoke, aromatic candles, cleaning fluids, oil or kerosene lamps, etc.) in the air exist, may discolor walls.

**IMPORTANT:** Vent-free heaters add moisture to the air. Although this is beneficial, installing appliance in rooms without enough ventilation air may cause mildew to form from too much moisture. See *Air for Combustion and Ventilation*, page 4.

**CHECK GAS TYPE**

Use the correct gas type (natural or propane/LP) for your appliance. If your gas supply is not correct or if you do not know your gas type, do not install appliance.

**INSTALLATION ITEMS NEEDED**

Before installing appliance, make sure you have the items listed below.
- external regulator for propane/LP unit only (supplied by installer)
- piping (check local codes)
- sealant (resistant to propane/LP gas)
- equipment shutoff valve *
- test gauge connection *
- ground joint union
- sediment trap (optional)
- tee joint
- pipe wrench
- approved flexible gas line (not provided), or provided gas connector (if allowed by local codes)

* A CSA/AGA design-certified equipment shutoff valve with 1/8” NPT tap is an acceptable alternative to test gauge connection. Purchase the optional CSA/AGA design-certified equipment shutoff valve from your dealer.

For propane/LP units, the installer must supply an external regulator. The external regulator will reduce incoming gas pressure. You must reduce incoming gas pressure to between 11 and 14 inches of water. If you do not reduce incoming gas pressure, heater regulator damage could occur.

**LOG SET PLACEMENT**

Place the log set in the center of your fireplace or firebox.

**CLEARANCES (Vent-Free Operation Only)**

<table>
<thead>
<tr>

<td>18&quot;</td>
</tr>
</tbody>
</table>

*Measured at 14” Depth
WARNING: Maintain the minimum clearances.

Mantel Clearances for Installation

If placing mantel above heater, you must meet the minimum clearance between the mantel shelf and the top of the firebox opening.

NOTICE: Surface temperatures of adjacent walls and mantels become hot during operation. Walls and mantels above the firebox may become hot to the touch. If installed properly, these temperatures meet the requirement of the national product standard. Follow all minimum clearances shown in this manual.

Note: All vertical measurements are from top of fireplace opening to bottom of mantel shelf. All measurements are in inches.

Figure 3 - Minimum Mantel Clearances for Installation

WARNING: This appliance requires a 5/8” UNF (Unified National Fine Thread) and 1/2” NPT (National Pipe Thread) inlet connection and the gas connection tube provided.

WARNING: A qualified service person must connect log set to gas supply. Follow all local codes.

WARNING: Never connect natural gas log set to private (non-utility) gas wells. This gas is commonly known as wellhead gas.

IMPORTANT: For natural gas, check gas line pressure before connecting heater to gas line. Gas line pressure must be no greater than 10.5” of water. If gas line pressure is higher, heater regulator damage could occur.

CAUTION: Never connect propane/LP log set directly to the propane/LP supply. This appliance requires an external regulator (not supplied). Install the external regulator between the appliance and propane/LP supply.

For propane/LP gas, the installer must supply an external regulator. The external regulator will reduce incoming gas pressure. You must reduce incoming gas pressure to between 11” and 14” of water. If you do not reduce incoming gas pressure, heater regulator damage could occur. Install the external regulator with the vent pointing down as shown in Figure 4. Pointing the vent down protects it from freezing rain or sleet.

Figure 4 - External Regulator with Vent Pointing Down
Shutoff Valve

Installation must include an equipment shutoff valve, union, and plugged 1/8” NPT tap. Locate NPT tap within reach for test gauge hook up. NPT tap must be upstream from appliance.

IMPORTANT: Install equipment shutoff valve in an accessible location. The equipment shutoff valve is for turning on or shutting off the gas to the appliance.

Check your building codes for any special requirements for locating equipment shutoff valve to fireplaces.

Apply pipe joint sealant lightly to male NPT threads. This will prevent excess sealant from going into pipe. Excess sealant in pipe could result in clogged fireplace valves. Never use sealant on flare threads.

Pressure Testing Gas Supply Piping System

Test Pressures In Excess Of 1/2 PSI (3.5 kPa)

1. Disconnect appliance with its main gas valve (control valve) and equipment shutoff valve from gas supply piping system. Pressures in excess of 1/2 psi will damage appliance gas regulator.

2. Cap off open end of gas pipe where equipment shutoff valve was connected.

3. Pressurize supply piping system by either opening propane/LP supply tank valve for propane/LP gas or opening main gas valve located on or near gas meter of natural gas or using compressed air.

4. Check all joints of gas supply piping system. Apply noncorrosive leak detection fluid to all joints. Bubbles forming show a leak. Correct all leaks at once.

5. Correct all leaks at once.

6. Reconnect appliance and equipment shutoff valve to gas supply. Check reconnected fittings for leaks.
Test Pressures Equal To or Less Than 1/2 PSIG (3.5 kPa)

1. Close equipment shutoff valve (see Figure 6).
2. Pressurize supply piping system by either opening propane/LP supply tank valve for propane/LP gas or opening main gas valve located on or near gas meter of natural gas or using compressed air.
3. Check all joints from gas meter to equipment shutoff valve for natural gas or propane/LP supply to equipment shutoff valve for propane/LP. Apply noncorrosive leak detection fluid to all joints. Bubbles forming show a leak.
4. Correct all leaks at once.

**Figure 6 - Equipment Shutoff Valve**

**PRESSURE TESTING APPLIANCE GAS CONNECTIONS**

1. Open equipment shutoff valve (see Figure 14).
2. For natural gas, open main gas valve located on or near gas meter. For propane/LP gas, open propane/LP supply tank valve.
3. Make sure control knob of fireplace is in the OFF position.
4. Check all joints from equipment shutoff valve to gas control valve. Apply noncorrosive leak detection fluid to all joints. Bubbles forming show a leak.
5. Correct all leaks at once.
6. Light fireplace (see Operating Log Set, page 13). Check all other internal joints for leaks.
7. Turn off fireplace (see To Turn Off Gas To Log Set, page 14).

**OPTIONAL REMOTE CONTROL SET INSTALLATION AND OPERATION**

Remote control set included with log set.

- Install four (4) "AA" batteries into the remote receiver box as shown on the left.
- Install three (3) "AAA" batteries into the remote control as shown on the left.

**COMMUNICATION BETWEEN THE REMOTE CONTROL TRANSMITTER AND THE RECEIVER**

To program the transmitter to the receiver move the three positions slider of the receiver in the REMOTE position and depress the ON/OFF key of the transmitter. The System has an automatic learning mode that allows the receiver to mate with a new transmitter in the event the transmitter must be replaced. As soon as the receiver module receives the first correct command from any remote control it captures the new address and then "beeps" 3 times to confirm synchronization and command execution.
Log Placement   Premier Estate 24
REMOTE-READY MODELS
FOR YOUR SAFETY
READ BEFORE LIGHTING

⚠️ WARNING: If you do not follow these instructions exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

A. This appliance has a pilot which must be lighted by hand. When lighting the pilot, follow these instructions exactly.

B. BEFORE LIGHTING smell all around the appliance area for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle on the floor.

WHAT TO DO IF YOU SMELL GAS
• Do not try to light any appliance.
• Do not touch any electric switch; do not use any phone in your building.
• Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions.
• If you cannot reach your gas supplier, call the fire department.

C. Use only your hand to push in or turn the gas control knob. Never use tools. If the knob will not push in or turn by hand, don’t try to repair it, call a qualified service technician or gas supplier. Force or attempted repair may result in a fire or explosion.

D. Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.

LIGHTING INSTRUCTIONS

⚠️ WARNING:
• If fireplace has glass doors, never operate this heater with glass doors closed. If you operate heater with doors closed, heat buildup inside fireplace may cause glass to burst. Make sure there are no obstructions across openings of fireplace.
• You must operate this heater with a fireplace screen in place. Make sure fireplace screen is closed before running heater.

NOTICE: During initial operation of new heater, burning logs will give off a smell. Orange flame will also be present. Open damper or window to vent smell. This will only last a few hours.

Note: Home owners generally prefer to operate their heater with the chimney damper closed. This will put all the heat into the room. However, there may be times you will desire the full flames of the HI heat setting but will find the heat output excessive. You can open the chimney damper (if you have one) fully or partially to release some of the heat.

⚠️ WARNING: Damper handle will be hot if heater has been running.

1. STOP! Read the safety information column 1.
2. Make sure equipment shutoff valve is fully open.
3. Set selector switch in the OFF position.

⚠️ WARNING: Burners will come on automatically within one minute when the selector switch is in the ON position after the pilot is lit.
4. Press in and turn control knob clockwise \( \uparrow \) to the OFF position (see Figure 1).

5. Wait five (5) minutes to clear out any gas. Then smell for gas, including near the floor. If you smell gas, STOP! Follow “B” in the safety information, column 1, page 13. If you don’t smell gas, go to the next step.

6. Press in and turn control knob counterclockwise \( \downarrow \) to the PILOT position. Press in control knob for five (5) seconds (see Figure 17).

   Note: You may be running this heater for the first time after hooking up to gas supply. If so, the control knob may need to be pressed in for 30 seconds or more. This will allow air to bleed from the gas system.

7. With control knob pressed in, press and release ignitor button. This will light pilot. The pilot is attached to the front burner. If needed, keep pressing ignitor button until pilot lights.

   Note: If pilot does not stay lit, contact a qualified service person or gas supplier for repairs.

   • If control knob does not pop out when released, contact a qualified service person or gas supplier for repairs.

   Note: If pilot goes out, repeat steps 4 through 8.

9. Slightly push in and turn control knob counterclockwise \( \downarrow \) to the ON position.

10. Wait one minute and switch selector switch to the ON position to light burners.

11. Set flame adjustment knob to any level between HI and LO.

![Figure 17 - Control Knob and Ignitor Button Location]

---

**CAUTION:** Do not try to adjust heating levels by using the equipment shutoff valve.

**WARNING:** Make sure the selector switch is in the OFF position when you are away from home for long periods of time. Heater will come on automatically with selector switch in the ON position.

Note: The pilot flame on natural gas units will have a slight curve, but flame should be blue and have no yellow or orange color.

![Figure 18 - Pilot (Propane/LP)]

![Figure 19 - Pilot (Natural)]

---

**TO TURN GAS OFF TO APPLIANCE**

**Shutting Off Heater**

1. Turn control knob clockwise \( \uparrow \) to the OFF position.

2a. Set selector switch in the OFF position.

2b. If Using Optional Hand-Held Remote: Set selector switch in the OFF position to prevent draining battery.

**Shutting Off Burners Only (pilot stays lit)**

You may shut off the burners and keep the pilot lit by doing one of the following:

1. Turn control knob clockwise \( \uparrow \) to the PILOT position.

2. Use remote control manual OFF button.

3. Set selector switch in the OFF position.
**HAND-HELD REMOTE OPERATION**

**NOTICE:** You must light the pilot before using the hand-held remote control unit. See *Lighting Instructions* on page 13.

After lighting, let pilot flame burn for about one minute. Turn control knob to ON position. Adjust flame adjustment knob anywhere between HI and LO. Slide the selector switch to the REMOTE position (see Figure 20).

**Note:** The burner may light if hand-held remote was on when selector switch was last turned off. You can now turn the burner on and off with the hand-held remote control unit.

**IMPORTANT:** Do not leave the selector switch in the REMOTE or ON position when the pilot is not lit. This will drain the battery.

---

**Figure 20 - Setting the Selector Switch, Control Knob and Flame Adjustment**

**Figure 21 - On/Off Hand-Held Remote Control Unit**

**Manual Mode**
1. Press the **Side Slider** to turn on the hand-held remote control.
2. Press the **POWER** button to turn on the fireplace.
3. Press the **POWER** button to turn off the fireplace.

**WIRING DIAGRAM**

*Note:* For proper operation of optional accessories, the wires from the thermopile to the control must be connected exactly as shown.

**IMPORTANT!**
Check and make sure the logs are clear of The burner flame. Flames touching the logs can produce sooting!
INSPECTING BURNERS

Check pilot flame pattern and burner flame patterns often.

PILOT FLAME PATTERN

Figure 22 shows a correct pilot flame pattern. Figure 23 shows an incorrect pilot flame pattern. The incorrect pilot flame is not touching the flame sensor. This will cause the flame sensor to cool. When the flame sensor cools, the fireplace will shut down.

If pilot flame pattern is incorrect, as shown in Figure 23
• turn fireplace off (see Turning OFF The Appliance, page 14)
• see Cleaning and Maintenance

Note: The pilot flame on natural gas units will have a slight curve, but flame should be blue and have no yellow or orange color.

Figure 22 - Correct Pilot Flame Pattern
(Your pilot may vary from pilots shown)

Figure 23 - Incorrect Pilot Flame Pattern
(Your pilot may vary from pilots shown)

MAIN BURNER

Periodically inspect all burner flame holes with the fireplace running. Some burner flame holes may become blocked by debris or rust, with no flame present. If so, turn off fireplace and let cool. Remove blockage. Blocked burner flame holes may create soot.

BURNER FLAME PATTERN

Figure 24 shows correct burner flame pattern. Figure 25 shows incorrect burner flame pattern. The correct burner flame pattern shows yellow tipping at top of blue flame. If burner flame pattern is incorrect, as shown in Figure
• turn fireplace off (see Turning OFF The Appliance, page 16)
• see Troubleshooting, page 1

Figure 24 - Correct Burner Flame Pattern
Showing Blue Flame with Yellow/White Tips

Figure 25 - Incorrect Burner Flame Pattern
Showing Solid Yellow/Orange Flame

CLEANING AND MAINTENANCE

⚠️ WARNING: Turn off fireplace and let cool before cleaning.

⚠️ CAUTION: Keep burner and control compartment clean. See installation and operating instructions accompanying heater. Inspect these areas of fireplace before each use. Have fireplace inspected yearly by a qualified service person. Fireplace may need more frequent cleaning due to excessive lint from carpeting, bedding material, pet hair, etc.

⚠️ WARNING: Failure to keep the primary air opening of the burner clean may result in sooting and property damage.

Figure 26 - Injector Holder On Outlet Burner Tube
BURNER INJECTOR HOLDER AND PILOT AIR INLET HOLE

The primary air inlet holes allow the proper amount of air to mix with the gas. This provides a clean burning flame. Keep these holes clear of dust, dirt, lint, and pet hair. Clean these air inlet holes prior to each heating season. Blocked air holes will create soot. We recommend that you clean the unit every three months during operation and have heater inspected yearly by a qualified service person (see Fig. 26).

We also recommend that you keep the burner tube and pilot assembly clean and free of dust and dirt. To clean these parts we recommend using compressed air no greater than 30 PSI. Your local computer store, hardware store, or home center may carry compressed air in a can. You can use a vacuum cleaner in the blow position. If using compressed air in a can, please follow the directions on the can. If you don’t follow directions on the can, you could damage the pilot assembly.

1. Shut off the unit, including the pilot. Allow the unit to cool for at least thirty minutes.
2. Inspect burner, burner primary air holes on injector holder and pilot primary air inlets for dust and dirt (see Fig. 27).
3. Blow air through the ports and holes in the burner.
4. Check the injector holder located at the end of the burner tube again. Remove any large particles of dust, dirt, lint, or pet hair with a soft cloth or vacuum cleaner nozzle.
5. Blow air into the primary air holes on the injector holder.

TROUBLESHOOTING

Note: All troubleshooting items are listed in order of operation.

<table>
<thead>
<tr>
<th>OBSERVED PROBLEM</th>
<th>POSSIBLE CAUSE</th>
<th>REMEDY</th>
</tr>
</thead>
</table>
| When ignitor button is pressed, there is no spark at ODS/pilot | 1. Ignitor electrode not connected to ignitor cable  
2. Ignitor cable pinched or wet  
3. Piezo ignitor nut is loose | 1. Reconnect ignitor cable  
2. Free ignitor cable if pinched by any metal or tubing. Keep ignitor cable dry  
3. Tighten nut holding piezo ignitor to base panel of log set. Nut is located behind base panel |
| | 4. Broken ignitor cable  
5. Bad piezo ignitor  
6. Ignitor electrode positioned wrong  
7. Ignitor electrode broken | 4. Replace ignitor cable  
5. Replace piezo ignitor  
6. Replace ignitor  
7. Replace ignitor |
| When ignitor button is pressed, there is spark at ODS/pilot but no ignition | 1. Gas supply turned off or manual shutoff valve closed  
2. Control knob not in PILOT position  
3. Control knob not pressed in while in PILOT position  
4. Air in gas lines when installed  
5. ODS/pilot is clogged  
6. Gas regulator setting is not correct | 1. Turn on gas supply or open manual shutoff valve  
2. Turn control knob to PILOT position  
3. Press in control knob while in PILOT position  
4. Continue holding down control knob. Repeat igniting operation until air is removed  
5. Clean ODS/pilot (see Cleaning and Maintenance, page 18) or replace ODS/pilot assembly  
6. Replace gas regulator |

### Observation Problem

<table>
<thead>
<tr>
<th>Dark residue on logs or inside of fireplace</th>
<th>White powder residue forming within burner box or on adjacent walls or furniture</th>
<th>Heater produces a clicking/ticking noise just after burner is lit or shut off</th>
<th>Heater produces unwanted odors</th>
<th>Heater shuts off in use (ODS operates)</th>
<th>Gas odor even when control knob is in OFF position</th>
<th>Gas odor during combustion</th>
<th>Remote does not function (Remote-Ready Models Only)</th>
</tr>
</thead>
</table>
| 1. Improper log placement                  | 1. When heated, vapors from furniture polish, wax, carpet cleaners, etc. turn into white powder residue | 1. Metal expanding while heating or contracting while cooling | 1. Heater burning vapors from paint, hair spray, glues, cleaners, chemicals, new carpet, etc. (see IMPORTANT statement above)  
2. Gas leak. See Warning statement at top of page | 1. Not enough fresh air is available  
2. Low line pressure  
3. ODS/pilot is partially clogged | 1. Gas leak. See Warning statement at top of page  
2. Control valve defective | 1. Foreign matter between control valve and burner  
2. Gas leak. See Warning statement at top of page | 1. Battery is not installed. Battery power is low |

#### Possible Cause

| 1. Improper log placement | 2. Drafts or other air currents affecting flame pattern | 3. Air holes at burner inlet blocked | 4. Burner flame holes blocked | 1. Turn heater off when using furniture polish, wax, carpet cleaners, or similar products | 1. Open window and ventilate room. Stop using odor causing products while heater is running | 1. Locate and correct all leaks (see Checking Gas Connections, page 9) | 1. Replace batteries in receiver and hand-held remote control |

#### Remedy

| 1. Properly locate logs (see Installing Logs, page 11-12) | 2. Eliminate source of drafts around heater | 3. Clean out air holes at burner inlet. Periodically repeat as needed | 4. Remove blockage or replace burner | 2. Locate and correct all leaks (see Checking Gas Connections, page 9) | | |

**IMPORTANT:** Operating heater where impurities in air exist may create odors. Cleaning supplies, paint, paint remover, cigarette smoke, cements and glues, new carpet or textiles, etc., create fumes. These fumes may mix with combustion air and create odors. These odors will disappear over time.

## SERVICE INFORMATION

### REPLACEMENT PARTS

**Note:** Use only original replacement parts. This will protect your warranty coverage for parts replaced under warranty.

### Parts Under Warranty

Contact authorized dealers of this product. If they can’t supply original replacement part(s), call SHM International’s Technical Service Department at (800) 229-5647. When calling SHM International, have ready:
- your name
- your address
- model and serial numbers of your heater
- how heater was malfunctioning
- type of gas used (propane/LP or natural gas)
- purchase date

Usually, we will ask you to return the part to the factory.

### Parts Not Under Warranty

Contact authorized dealers of this product. If they can’t supply original replacement part(s), call SHM International at (800) 229-5647 for referral information. When calling SHM International, have ready:
- model number of your heater
- the replacement part number (see Page 22)

### SERVICE HINTS

When gas pressure is too low:
- pilot will not stay lit
- heater will not produce the specified heat
- propane/LP gas supply may be low

You may feel your gas pressure is too low. If so, contact your local natural or propane/LP gas supplier.

**Note:** Use only original replacement parts. This will protect your warranty coverage for parts replaced under warranty.

### TECHNICAL SERVICE

You may have further questions about installation, operation or troubleshooting. If so, contact SHM International’s Technical Service Department at (800) 229-5647.

When calling please have your model and serial numbers of your heater ready. You can also visit SHM International’s Technical Service web site at www.sureheat.com.

WARRANTY INFORMATION

KEEP THIS WARRANTY

Model __________________________
Serial No. ________________________
Date Purchased __________________

Always specify model and serial numbers when communicating with the factory.

LIMITED WARRANTY

SHM International Corp. warrants the components of this appliance to be free from defects in material and workmanship for one (1) year from the date of purchase. SHM International Corp. at its option, will repair or replace this product or any component of the product found to be defective during the warranty period. Replacement will be made with a new manufactured product or component. If the product is no longer available, replacement may be made with a similar product of equal value. This warranty does not include transportation or shipping costs of any kind. This your exclusive warranty.

This warranty is valid for the original retail purchaser from the date of initial retail purchase and is not transferable. Keep the original sales receipt. Proof of purchase is required to obtain warranty parts.

This warranty does not cover normal wear of parts such as scratches and dents of the components or damage resulting from any of the following:

• negligent use or misuse of the product, including exposing the product to chemicals or cleaning products not approved by SHM International Corp.
• corrosion, rust or discoloring of any kind
• use or installation contrary to specified instructions and applicable building codes, including heating the product to temperatures above its rated specifications which can cause considerable warping
• disassembly, including removal of the product from a built-in installation
• damage resulting from accident, alteration, misuse, abuse, hostile environments, or improper installation
• repair or alteration
• acts of God, such as fire, flood, hurricanes, and tornadoes
• gas cylinders, propane tanks or other fuel delivery systems, including connections to a household fuel supply
• usage other than single-family household use such as commercial or industrial use
• minor warping or discoloration of parts, which is normal and not a defect under this warranty

DO NOT RETURN THIS PRODUCT TO THE PLACE OF PURCHASE

If the appliance does not operate properly, first thoroughly carry out the instructions provided with the unit to ensure that the appliance is installed correctly and check the troubleshooting section in the use and care manual.

We recommend you return the warranty registration card so that you can be contacted when any questions of safety arise that could affect you. The return of the warranty registration card is not a condition for warranty coverage.

Because of continuing product improvement, these specifications are subject to change without notice.

If you have other questions or need replacement parts, contact our Customer Service Hotline at (800) 229-5647 or visit our website at www.sureheat.com.

SHM International Corp., 1861 West Oak Parkway, Marietta, GA 30062
