

Attach another end of each V- bar to the central hole of support bar

Insert extension pipes into upright arms.
Push the buttons in and slide the extension into the frame upright.

Take the round hang bar and fasten to each opposite upright.
The round-headed screws go through the holes on each end of the hang bar.
Screw the hang bar into the extensions pipers.
Use the tool provided (a 6mm hex allen wrench) to tighten the screws securely.

Adjust the height.

Push the buttons in and move the upper assembly up or down until you achieve the desired height.

There are 8 different height adjustments

**Congratulations on assembling your new rack!
And you thought it was going to be hard!**
