

Step Stool Use and Care Manual

Usage Steps

1. **Using the Step Stool** : Lay out all numbered accessories and ensure you have the provided instructions and any required tools.
2. **Installation** : Align the prerilled holes on the wooden parts with those on the steel tubing according to the instructions. Insert the appropriate screws through the holes and tighten them gradually, ensuring all components are firmly connected. Check the overall stability of the assembled step stool before use.
3. **Folding the Step Stool** : If the step stool has a folding function, first ensure it is unloaded and there are no items on it. Locate the locking mechanisms and release them as per the provided instructions. Gently fold the components together, guiding them carefully to avoid damage.

Storage

When not in use, store the step stool in a dry place, away from direct sunlight and moisture. If folded, store it in an upright position or hang it if possible to prevent deformation. Avoid stacking heavy objects on top of the step stool, especially if it is made of wood, as this may cause dents or cracks.
