

USE INSTRUCTIONS – HVAC UNIT PANS

GENERAL

- Recommended for use with indoor HVAC equipment for condensate management

HVAC UNIT PAN INSTALLATION

- Place HVAC unit pan under the area where the HVAC unit is to be placed
- Set HVAC unit down onto the center of pan without putting any weight or force on the sides of the pan
- Use blocks in corners to suspend the unit as desired, or simply place pan under strap-suspended units
- Utilize sensor cut out area to place water sensor alarm (not included) to appropriate placement as desired

INSTALLING DRAIN HOSE ADAPTER

- Route 1 3/8" hole in prepared drainhose adapter area or other area as desired
- Remove circular nut and rubber O-ring from drainhose adapter
- Install drain hose adapter with threaded side through to inside of pan
- Place the O-ring on the threaded side of adapter (inside of pan) and slide it to the pan inside wall
- Hand-screw the circular nut until the nut is firmly up against the O-ring and inside wall of the pan (hand tight)
- Attach hose (not included) to the outside of the drain adapter, with appropriate cement or glue and run hose to a terminus per your local building code

PLEASE AVOID

- Avoid setting the HVAC unit on the edge of the pan or it may crush the pan
- Avoid stepping on the pan
