

TILE CONNECTION

Cleaning Instructions

Use pH balanced cleaners or soap-less detergents and soft bristle brushes for daily cleaning. Immediately wipe all spills. Most sealer brands have specific cleaning solutions applicable for natural stone. If heavy duty cleaning is required, first try to solve with pH balanced cleaners, which can include scouring cleaners and poultices that help extract the stain. Always test abrasive or untested cleaning solutions in an inconspicuous area to evaluate if it is suitable for the tile. If an acidic cleaner is deemed necessary, a light solution of sulfamic acid is the safest and most recommended in cleaning difficult stone or grout problems. Be sure to rinse the area well after cleaning.
