DraftTight® Old Work Box Creates a Draft-Resistant Seal for Better Energy Efficiency in Remodeled Homes.

The easiest method for adding an electrical box to an existing home is to use what's known as an old work electrical box. Conventional old work boxes, however, provide no means for sealing the wall surface opening to prevent airflow from entering the house around the perimeter of the box and through the cable clamp openings.

The Carlton® DraftTight® Old Work Box takes care of that problem with ease. Featuring a flexible drywall flange and gaskets over cable entry points, this single-gang old work box automatically creates a draft-resistant seal with no additional labor required to seal air gap openings. This translates into a more energy-efficient home that's easier to heat in winter and cool in summer.

Count on the Carlton® brand from Thomas & Betts to support Green home builders with full-featured, cost-conscious products addressing ease of use, labor costs and energy efficiency.

- Mounts directly to the wall with built-in old work swing clamps — no nailing to studs
- Automatically creates an air seal around the perimeter of the box with a flexible front flange and gasketed cable entry points — no additional labor required to seal air gap openings
- Complies with the 2012 International Efficiency Code Compliance (IECC) residential building energy code adopted by a growing number of states
- Made of high-strength polycarbonate that won't shatter when cold or distort in heat

Carlton® DraftTight® Old Work Box
