WHAT TO CONSIDER WHEN CHOOSING 3M™ EARMUFFS

EARMUFFS

Hearing loss due to noise is almost entirely preventable through consistent use of hearing protection. Try a variety of different devices to find what works for you. Since hearing protectors must fit properly and be worn correctly to provide protection, read the instructions carefully before use. Hearing protector effectiveness is specified by a Noise Reduction Rating (NRR), typically ranging from 23 to 30 dB for 3M's retail hearing protection products. The more carefully you fit and wear your hearing protectors, the higher your protection will be.

ADVANTAGES OF EARMUFFS

- Easier to fit
- Convenient for intermittent use
- Long-lasting and durable
- Optional music/entertainment

PASSIVE EARMUFFS

NRR 24 dB-30 dB

- Easy to fit
- More durable and longer lasting than earplugs
- More protection for the same volume/weight than electronic hearing protection
- Adjustable to fit a wide variety of head sizes
- Convenient for intermittent use

Tip: For sustained exposures to very loud noise, or if you feel the need for more protection, wear earmuffs and earplugs together (dual protection) for an additional 3 dB to 5 dB of noise reduction.

ENTERTAINMENT EARMUFFS

NRR 23 dB-24 dB

- Easy to fit
- Passive hearing protectors with radios and/or Bluetooth® Wireless Technology
- Built-in audio limiter/dosimeter helps keep volume levels safe
- High-fidelity speakers provide premium sound quality
