

Wood and Wine

Succulents

Care Directions:

Succulents need at least half, to a full day of sunlight. Succulents grown in too much shade will start to stretch looking for more sun. Placing your arrangement in ample sunlight indoors or out will promote beautiful colorful blooms, year round.

In warmer months we suggest watering twice a week in the morning. Allowing the soil to dry completely between waterings; succulents don't like to have wet feet. In cooler months we recommend watering once a week or as needed.

As your succulents grow the lower petals will need to be gently removed to retain the shape of your arrangement. We suggest trimming every six months; replanting the clippings into your centerpiece to expand your arrangement.

Thank you for shopping local, supporting a female owned business and choosing one of my sustainable designs for your home or office.

I hope it brings joy in a time we could all use it!
