©2011 Hunter Fan Co.
Welcome

Your new Hunter® ceiling fan is an addition to your home or office that will provide comfort and performance for many years. This installation and operation manual gives you complete instructions for installing and operating your fan.

We are proud of our work. We appreciate the opportunity to supply you with the best ceiling fan available anywhere in the world.

Before installing your fan, for your records and warranty assistance, record information from the carton and Hunter nameplate label (located on the top of the fan motor housing).

Cautions and Warnings

- READ THIS ENTIRE MANUAL CAREFULLY BEFORE BEGINNING INSTALLATION. SAVE THESE INSTRUCTIONS.
- Use only Hunter replacement parts.
- To reduce the risk of personal injury, attach the fan directly to the support structure of the building according to these instructions, and use only the hardware supplied.
- To avoid possible electrical shock, before installing your fan, disconnect the power by turning off the circuit breakers to the outlet box and associated wall switch location. If you cannot lock the circuit breakers in the off position, securely fasten a prominent warning device, such as a tag, to the service panel.
- All wiring must be in accordance with national and local electrical codes and ANSI/NFPA 70. If you are unfamiliar with wiring, use a qualified electrician.
- To reduce the risk of personal injury, do not bend the blade attachment system when installing, balancing, or cleaning the fan. Never insert foreign objects between rotating fan blades.
- To reduce the risk of fire, electrical shock, or motor damage, do not use a solid-state speed control with this fan. Use only Hunter speed controls, which are solid state.
- This product conforms to UL STD 507 and is certified to STD C22.2 No.113
- Wash your hands after your fan installation is complete.

Preparing the Fan Site

Step 1 - Choose the Fan Site

Proper ceiling fan location and attachment to the building structure are essential for safety, reliable operation, maximum efficiency, and energy savings.

Choose a fan site where:

- No object can come in contact with the rotating fan blades during normal operation.
- The fan blades are at least 7 feet above the floor and the ceiling is at least 8 feet high.
- The fan blades have no obstructions to airflow, such as walls or posts, within 30 inches of the fan blade tips.
- The fan is directly below a joist or support brace that will hold the outlet box and the full weight of the fan.

Checklist for Existing Fan Site

If you want to use an existing fan site, complete the following checklist to determine if the site is acceptable and safe for your new Hunter fan. If you cannot check off every item, prepare a new fan site as described on this page.

Fan Support System
- Fan attaches directly to building structure.
- Fan support system will hold full weight of the fan and light kit.

Ceiling Hole
- The outlet box clearance hole is directly below the joist or support brace.

Outlet Box
- The outlet box is an UL-approved octagonal 4” x 1-1/2” outlet box (or as specified by the support brace manufacturer).
- The outlet box is secured to the joist or support brace by wood screws and washers through the inner holes of outlet box.
- The outer holes of the outlet box are aligned with joist or support brace.
- The bottom of the outlet box is recessed a minimum of 1/16” into ceiling.

Wiring
- The electrical cable is secured to outlet box by an approved connector.
- Six inches of lead wires extend from outlet box.

If your existing fan site is suitable, skip ahead to Section 2 • Installing the Ceiling Plate.
Preparing the Fan Site (continued)

**Step 2 - Cut the Ceiling Hole**

2-1. Locate the site for the ceiling hole directly below the joist or support brace that will hold the outlet box and fan.
2-2. Cut a 4” diameter hole through the drywall or plaster of the ceiling. You will use the hole to install the support brace and outlet box.

**Step 3 - Install a Support Brace, If Necessary**

Determine if there is a ceiling joist directly above the ceiling hole. If the joist is there, determine if it is positioned to allow you to recess the outlet box a minimum of 1/16” into the ceiling. If NOT, install a support brace as follows:

3-1. Attach a 2” x 4” support brace between two joists. Position it to allow you to recess the bottom of the outlet box a minimum of 1/16” into the ceiling.
3-2. Check the support brace to ensure it will support the full weight of the fan and light kit.

**Step 4 - Install the Outlet Box**

4-1. Obtain a UL-approved octagonal 4” x 1-1/2” outlet box, plus two #8 x 1-1/2” wood screws and washers, available from any hardware store or electrical supply house.
4-2. Orient the outlet box so that both the inner and outer holes in the box align with the joist or support brace.
4-3. Drill pilot holes no larger than the minor diameter of the wood screws (5/64”) through the inner holes of the outlet box.
4-4. Attach the outlet box directly to the support brace or joist with two #8 x 1-1/2” wood screws and washers. The bottom of the outlet box must be recessed a minimum of 1/16” into the ceiling.

**Step 5 - Prepare the Wiring**

5-1. Make sure the circuit breakers to the fan supply line leads and associated wall switch location are turned off. If you cannot lock the circuit breakers in the off position, securely fasten a prominent warning device, such as a tag, to the service panel.
5-2. Thread the fan supply line through the outlet box so that the fan supply line extends at least 6” beyond the box.
5-3. Attach the fan supply line to the outlet box with an approved connector, available at any hardware store or electrical supply house.
5-4. Make certain the wiring meets all national and local standards and ANSI/NFPA 70.

You have now successfully prepared your ceiling fan site. For instructions to install your ceiling fan, go to your fan manual and continue with Section 2 • Installing the Ceiling Plate.
Installer’s Choice and Optional Accessories

Understanding Mounting and Installer’s Choice®

Hunter’s patented 2-position mounting system provides you maximum installation flexibility and ease. You can install your Hunter fan in one of two ways, depending on ceiling height and your preference: Standard or Angled. The steps in this manual include instructions for both Installer’s Choice mounting methods.

Considering Optional Accessories

Consider using Hunter’s optional accessories, including a wall-mounted or remote speed control. To install and use the accessories, follow the instructions included with each product. For quiet and optimum performance of your Hunter fan, use only Hunter speed controls.

For ceilings higher than 8 feet, you can purchase Hunter extension downrods. All Hunter fans use sturdy 3/4” diameter pipe to assure stability and wobble-free performance.

⚠️ CAUTION: To reduce the risk of personal injury, attach the fan directly to the support structure of the building according to these instructions, and use only the hardware supplied.
To install a ceiling fan, be sure you can do the following:

- Locate the ceiling joist or other suitable support in ceiling.
- Drill holes for and install wood screws.
- Identify and connect electrical wires.
- Lift 40 pounds.

If you need help installing the fan, your Hunter fan dealer can direct you to a licensed installer or electrician.

### Gathering the Tools

You will need the following tools for installing the fan:

- Electric drill with 9/64" bit
- Standard screwdriver (magnetic tip recommended)
- Phillips-head screwdriver (magnetic tip recommended)
- Wrench or pliers
- Ladder (height dependent upon installation site)

### Checking Your Fan Parts

Carefully unpack your fan to avoid damage to the fan parts. Refer to the included Parts Guide. Check for any shipping damage to the motor or fan blades. If any parts are missing or damaged, contact your Hunter dealer or call Hunter Technical Support Department at 888-830-1326. (In Canada, call 866-268-1936).

**Installing Multiple Fans?**

If you are installing more than one fan, keep the fan blades and blade irons (if applicable) in sets, as they were shipped.
2 • Installing the Ceiling Plate

CAUTION: To avoid possible electrical shock, before installing your fan, disconnect the power by turning off the circuit breakers to the outlet box and associated wall switch location. If you cannot lock the circuit breakers in the off position, securely fasten a prominent warning device, such as a tag, to the service panel.

2-1. Drill two pilot holes into the wood support structure through the outermost holes in the outlet box. The pilot holes should be 9/64” in diameter.

For Angled Ceilings: Be sure to orient the ceiling plate so that the two tabs are pointing toward the ceiling peak.

2-2. Your fan comes with four preinstalled noise isolators. Check to make sure all four isolators are in place and were not removed during shipment.

2-3. Place a flat washer on each of the two 3” wood screws.

2-4. Thread the supply wires from the outlet box in the ceiling through the hole in the center of the ceiling plate.

2-5. Align the slotted holes in the ceiling plate with the pilot holes you drilled in the wood support structure. For proper alignment use slotted holes directly across from each other.

Note: The isolators should be flush against the ceiling.

2-6. Pass the screws through the slotted holes in the ceiling plate into the pilot holes you drilled.

Tighten the screws into the 9/64” pilot holes; do not use lubricants on the screws. Do not over tighten.
3 • Assembling and Hanging the Fan

**WARNING:** Fan may fall if not assembled as directed in these installation instructions.

3-1. Unbundle the wires from the fan.

**For Standard or Angled mounting:**

3-2. Insert the downrod through the canopy and canopy trim ring. Feed the wires from the fan through the downrod on one side of the pin in the ball.

3-3. Loosen the square head setscrew on the adapter to install the pipe and ball assembly. **Note:** When the pipe and ball assembly is fully installed, 2-3 threads on the pipe will still be visible; this is normal. Securely retighten the setscrew with a wrench or pliers.

**CAUTION:** The adapter has a special coating on the threads. Do not remove this coating; the coating prevents the downrod from unscrewing. Once assembled, do not remove the downrod.

**Hanging the Fan:**

**Note:** To hang the fan, you must tilt the canopy to an almost vertical position so that the canopy slots sit on the ceiling plate hooks.

3-4. Raise the fan and align the slots in the canopy with the hooks on the ceiling plate.

3-5. Place the slots over the hooks to hang the fan.
4 • Setting the Remote Transmitter and Receiver

Setting DIP switches
When two or more fans are located near each other, you may desire to have the receiver/transmitter for each fan set to a different code, so that the operation of one fan does not affect the operation of the other fans.
The DIP switches for the receiver are located on the flat surface of the receiver. The DIP switches for the transmitter are in the battery compartment.

4-1. IMPORTANT! Before you change the DIP switch settings, make sure the battery is not connected to the transmitter.
Change the position of the DIP switches in the remote transmitter and the receiver. Make sure that the DIP switches match in the remote receiver and transmitter. If they don’t match, the transmitter will not function.

4-2. There is a toggle switch beside the DIP switches on the transmitter. Move the toggle switch toward the side that reads “CFL” if you are going to operate the fan with CFL bulbs. Move the switch to the “INC” side if you are going to use incandescent bulbs.

4-3. Install the included 9-volt battery into the transmitter.

⚠ CAUTION: The remote control device complies with part 15 of the FCC rules. Changes or modifications not expressly approved by Hunter Fan Company could void your authority to operate this equipment.
Operation is subject to the following two conditions:
1. This device may not cause harmful interference.
2. This device must accept any interference received, including interference that may cause undesired operation.

⚠ WARNING: Use only the Hunter Fan speed control supplied with this fan.

4-4. Raise the fan and align the slots in the canopy with the hooks on the ceiling plate.

Note: To hang the fan, you must tilt the canopy to an almost vertical position so that the canopy slots sit on the ceiling plate hooks.
5 • Wiring the Fan

All wiring must be in accordance with national and local electrical codes and ANSI/NFPA 70. If you are unfamiliar with wiring, use a qualified electrician.

5-1. Make sure the power is still off.

5-2. To connect the wires, hold the bare metal leads together and place a wire connector over them, then twist clockwise until tight. For all these connections use the wire connectors provided.

⚠️ CAUTION: Be sure no bare wire or wire strands are visible after making connections.

5-3. Using a large wire connector, connect the ground wire from the ceiling to the green ground wire from the ceiling plate and the green ground wire from the downrod.

5-4. Using the large wire connectors, connect the white wire and the black wire from the ceiling as follows:
   - The white (common) power wire from the ceiling to the white wire from the receiver (marked on white tag “NEUTRAL IN”)
   - The black power wire from the ceiling to the black wire from the receiver (marked on red tag “LIVE IN”)

5-5. Using the small wire connectors, connect the wires from the fan as follows:
   - The black wire with a white stripe from the fan to the red wire from the receiver (marked on white tag “LIGHT OUT”)
   - The black wire from the fan to the black wire from the receiver (marked on white tag “FAN OUT”)
   - The white wire from the fan to the white wire from the receiver (marked on white tag “COMMON OUT”)

5-6. Check each connection to make sure no bare wire or wire strands are visible. Push all wires and wire connectors, except for the white antenna wire from the receiver, back through the ceiling plate into the outlet box.

5-7. Position the receiver in the canopy so that the antenna is close to the edge of the ceiling plate for clear reception.
6 • Installing the Canopy and Canopy Trim Ring

**WARNING:** Failure to complete the following steps could cause the fan to fall.

**Note:** It is recommended you use a magnetic tip screwdriver for the following steps.

6-1. Rotate the hanger ball so the tab in the canopy is secure in the hanger ball groove. **Note:** Your fan may have multiple tabs and grooves that must be aligned.

6-2. Swing the fan up to align the canopy screw holes with the mounting holes on the ceiling plate.

**WARNING:** The slots in the canopy must remain engaged while swinging the canopy for alignment.

6-3. Holding the canopy up with the screw holes aligned, partially install two canopy screws into the holes opposite the ceiling plate tabs.

6-4. Partially install a canopy screw between the slots in the canopy. When all the holes are properly aligned, securely tighten all three canopy screws.

6-5. Verify that the tabs in the canopy are still in the grooves of the hanger ball.

6-6. Align the tabs on the trim ring opposite the grooves in the hanger ball. Using both hands, push the canopy trim ring up to the top of the canopy. The canopy trim ring will snap and lock into place. **Note:** Should you need to remove the trim ring, press firmly on opposite sides of the trim ring directly above the groove in the hanger ball. The tabs will flex out releasing the canopy trim ring.
7 • Assembling the Blades

Hunter fans use several styles of fan blade irons (brackets that hold the blade to the fan).

7-1. Install the grommets into the blades by hand.

7-2. Place each blade between a blade iron and medallion. Install three blade screws to attach the medallion to the blade iron. Repeat for all blades.

7-3. Remove the blade mounting screws and metal shipping ring from the bottom of the motor. **Note:** Some blade mounting screws are installed in the motor to secure the metal shipping ring.

7-4. For each blade iron, insert one blade mounting screw through the blade iron, and attach loosely to the fan. Insert the second blade mounting screw, then securely tighten both mounting screws.
Your Hunter fan comes with an integrated light fixture assembly.

**WARNING:** Use only the light fixture supplied with this fan model.

8-1. To attach the light kit top housing, partially install two housing assembly screws into the light kit mounting plate.

8-2. Feed the upper plug connector through the center opening of the light kit top housing.

8-3. Align the keyhole slots in the housing with the housing assembly screws.

8-4. Turn the light kit top housing counterclockwise until the housing assembly screws are firmly situated in the narrow ends of the keyhole slots. Install the remaining screw into the housing. Tighten all three screws firmly.

**CAUTION:** Make sure the light kit top housing is securely attached to the light kit mounting plate. Failure to properly attach and tighten all three assembly screws could result in the light kit top housing and light fixture falling.
8-5. To attach the light kit, connect the upper plug connector from the motor to the lower plug connector in the light kit.

**Note:** Both plug connectors are polarized and will only fit together one way. Make sure the connectors are properly aligned before connecting them. Incorrect connection could cause improper operation and damage to the product.

8-6. Place the light kit over the light kit top housing. Align the holes in the light kit top housing with the light kit. Attach the light kit to the light kit top housing with three housing assembly screws. Tighten all three screws firmly.
Installing the Glass Bowl

8-7. First install the included CFL bulbs into the sockets.

8-8. Lift the glass bowl up to the light kit top housing. Align the three tabs in the glass bowl with the three slots in the light kit top housing.

8-9. Turn the glass bowl clockwise until it locks into place.
9 - Operating the Remote Control and Mounting the Holder

9-1. The remote transmitter has individual buttons for turning the fan off and on and controlling the light and fan speed.

9-2. For best operation, start the fan by pressing high, then select your desired speed.

9-3. The light button turns the light on to full brightness. Push the light button again to turn off the light.

9-4. Press the OFF button to turn the fan off.

9-5. When necessary, replace the battery with a 9-volt battery.

9-6. You can mount the remote holder to any toggle switch plate with the screws already in the switch plate. Or, you can simply mount the remote holder on the wall.

Steps 9-1 – 9-4

Step 9-6

Step 9-5
10-1. Restore power at the main electrical panel and turn on the wall switch. The light kit should turn ON. To dim the light, hold the light button down until you reach your desired brightness. Push the light button again to turn off the light.

**Note:** To turn on the light without the remote, turn off the wall switch for 5 seconds, then back on. The light kit will turn on at maximum brightness.

10-2. Press the remote control’s HIGH speed button. The fan should start and reach its maximum speed.

**Note:** For everyday operation, leave the wall switch ON. If the remote control will not be used for 5 days or more, turn the wall switch OFF.

10-3. Ceiling fans work best by blowing air downward (counterclockwise blade rotation) in warm weather to cool the room with a direct breeze. In cold weather, having the fan draw air upward (clockwise blade rotation) will distribute the warmer air trapped at the ceiling around the room without causing a draft.

10-4. For cleaning finishes, use a soft brush or lint-free cloth to prevent scratching. A vacuum cleaner brush nozzle can remove heavier dust. Remove surface smudges or accumulated dirt and dust using a mild detergent and a slightly dampened cloth. You may use an artistic agent, but never abrasive cleaning agents as they will damage the finish.

10-5. The blades on this fan have been treated with Hunter’s Dust Armor protection, making the blades less likely to attract dust and dirt. Use a dry or slightly damp lint free cloth to clean the blades. Do not use a furniture polish or any other cleaners that leave any residue, as they will damage the protective Dust Armor on the blades.

**To Change Airflow Direction**
Remove glass. Turn switch to the opposite position. Replace glass.
11 • Troubleshooting

Problem: Nothing happens; fan does not move
1. Turn power on, replace fuse, or reset breaker.
2. Loosen canopy, check all connections according to the wiring the fan section.
3. Check the plug connection in the switch housing.
4. Push motor reversing switch firmly left or right to ensure that the switch is engaged.
5. Pull the pull chain to ensure it is on.
6. Remove the shipping bumpers.

Problem: Noisy operation
1. Tighten the blade assembly screws and blade iron armature screws until snug.
2. Check to see if the blade is cracked. If so, replace all the blades.

Problem: Excessive wobbling
1. If your fan wobbles when operating, use the enclosed balancing kit and instructions to balance the fan.
2. Tighten all blade iron screws.
3. Turn power off, support fan very carefully, and check that the hanger ball is properly seated.

Problem: Lights shut off suddenly, but fan is still operating
1. Check to make sure the wattage and type of the light bulbs that are installed meet the specifications on the light socket.
2. Turn the power to the fan off at the wall switch. Wait 5 minutes, then resume power to the fan.

Problem: CFL bulbs flicker when controlled by a dimming remote or wall control
1. CFL light bulbs are not usually made for dimming. Replace the CFL bulbs with dimmable light bulbs, or install the fan in a location without a dimming control.

If you need parts or service assistance, please call 888-830-1326 (In Canada, call 866-268-1936) or visit us at our website at http://www.hunterfan.com.

Hunter Fan Company
7130 Goodlett Farms Parkway #400
Memphis, Tennessee 38016
