

Care and Maintenance

The biggest risk for any outdoor metal furniture is rust/oxidation. Over time, rust can create a real problem for any exposed metal surfaces and can even break down furniture. Luckily, it's easy to prevent rust, which is caused by water damage. Waterproof covers will generally take care of any regular seasonal rain or dampness; just make sure your covers are long enough to protect the chairs.

Use a soft, clean cloth that will not scratch the surface when dusting. Check bolts or nuts periodically and tighten them if necessary.
