

Use and Care Manual

Installation: Assemble steel furniture frames according to instructions. Ensure that all screws and components are properly installed and secured.

Use: It is recommended to place the furniture on a flat, stable ground to avoid tilting or sliding. The chair can support normal weight, but avoid overloading or overuse. Both indoor and outdoor environments can be used, but try to avoid prolonged direct sunlight or exposure to extreme weather conditions. Avoid scratching the steel frame with sharp or rough objects to avoid damaging the coating.

Clean: Wipe the surface of the furniture with a soft cloth to remove dust and dirt. Avoid chemical cleaners.

Check: Regularly check whether the parts of the furniture set are firm, and if they are loose or damaged, they should be repaired or replaced in time.

Storage: When not in use, keep the furniture in a dry and ventilated place to avoid prolonged exposure to sunlight or damp environments.
