

Warning

Do not to touch the glass after using unit, do not cover the glass with anything until cooled, do not pour water onto the fire glass to cool down.

How Much Do You Need?

- Round fire pit calculator = (diameter x diameter x glass height)/24 = glass (lbs)
- Rectangular fire pit/fireplace calculator = (length x depth x glass height)/19 = glass (lbs)

The glass is designed for gas fire pits and gas fireplaces to tolerate high temperatures without melting, burning or discoloring when used as recommended. The glass does NOT create toxic fumes, smoke, ash, or soot. Fire Glass is used to replace gas logs.

Once you have the glass in place, simply hold a lighter over the glass and slowly turn on your propane or natural gas. The results...a beautiful, modern day fire that's sure to attract attention.
