Dust Collectors

Enhance your workspace with our compact yet powerful DC5371 & DC5372 dust collectors. Designed for small workshops, they efficiently manage dust extraction from heavy-duty tools like routers and table saws. With improved collection-bag technology, these units capture even the finest dust particles, ensuring a cleaner, safer environment and reducing airborne contaminants.

Air Filtration Systems

Our advanced overhead air filters continue to work even when you're away. Set the speed and timer to your preference, especially useful in winterized home workshops with limited airflow. These air filter systems effectively remove lighter-than-air particles, ensuring a cleaner breathing space. The dual-filter system, with an outer layer capturing up to 5 microns and an inner layer targeting particles as small as 1 micron, provides comprehensive air purification.

Blast Gates

POWERTEC is at the forefront of blast gate technology. Our recent innovations include aluminum non-clogging integrated gates and lightweight tapered ABS gates. We also offer traditional ABS black gates, now enhanced with innovative features such as single-side and double-side threaded options for quick and easy connection to flexible hoses, improving the efficiency and versatility of your dust collection system.

Hoses & Hose Clamps

POWERTEC hoses, available in a range of lengths and diameters, are engineered for flexibility and durability to suit any dust collection application. Designed to navigate easily around obstacles, they ensure efficient dust collection from every corner of your workspace. Complementing our hoses, we offer many different styles of hose clamps, providing secure and effective solutions for maintaining optimal dust management in any workshop environment.
