**All of our painted door styles feature solid wood painted face frames.** As with any painted wood surface, expansion and contraction with changes in climate may cause fractures in the paint surface at joints. This is an acceptable characteristic and will vary based on climate conditions. In addition, there may be a slight color shift over time due to continued exposure to both natural and artificial light.

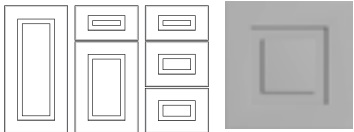

Full Overlay cabinetry is constructed from various pieces of solid wood and wood veneers. Differences in grain pattern and color should be expected. Color differences in wood are the result of variations in minerals found in the soil native to the tree's origin. Absorption of these minerals will vary by tree or parts of said tree. In addition, color changes can be experienced due to different exposure to light. All species of wood will display characteristics such as knots, pinholes, sap runs, mineral streaks and darkening with age. It is the natural beauty of wood to exhibit these characteristics and they will be present throughout your cabinetry.

The use of full height base cabinets and drawer stacks will help the kitchen to achieve the true metropolitan look. Use the full height cabinets as sink bases, cooktop bases and more!

Using cover panels on the sides, top and bottom of the wall cabinet and waterfall countertops on the base cabinets will create an inset door look in your new kitchen. Using horizontal hardware placement completes the look!

Give the kitchen a true metropolitan look by combining full height doors and drawer bases, verses standard drawer and door cabinets. Also simply installing the hardware horizontally on all cabinets can complete the look!

**All of our painted door styles feature solid wood painted face frames.** As with any painted wood surface, expansion and contraction with changes in climate may cause fractures in the paint surface at joints. This is an acceptable characteristic and will vary based on climate conditions. In addition, there may be a slight color shift over time due to continued exposure to both natural and artificial light.

Full Overlay cabinetry is constructed from various pieces of solid wood and wood veneers. Differences in grain pattern and color should be expected. Color differences in wood are the result of variations in minerals found in the soil native to the tree's origin. Absorption of these minerals will vary by tree or parts of said tree. In addition, color changes can be experienced due to different exposure to light. All species of wood will display characteristics such as knots, pinholes, sap runs, mineral streaks and darkening with age. It is the natural beauty of wood to exhibit these characteristics and they will be present throughout your cabinetry.

Newport Mythic Blue and Newport Pacific White

Need a nice square post for your island, or want a raised bar? Use fillers to create a square post to the width and height of your choosing. This image uses 6” wide fillers, however 3” wide fillers can be used as well. To create the apron under the countertop turn fillers horizontally and cut to fit on the job site.

Franklin Manganite

Want countertop storage that is behind closed doors? Use wall bridge cabinets in 18” high, placed under standard wall cabinets to create this space. You can add dimension to your kitchen by making these cabinets 15” deep, and gain extra storage as well! No door bridge cabinets can help create an open feel to your space. Placing these above a baking area or desk area can give easy access to cookbooks, mixing bowls or nice décor! Make sure to purchase skin to conceal any seams.

Washington Veiled Gray

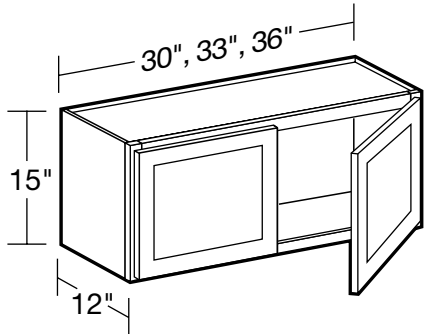

Using a full height door cabinet for your sink base can add a modern twist to your traditional kitchen. Make your new kitchen transitional!

Using ND Base Cabinets

Customize the depth of B24ND down to 12" you can use it on the end of a cabinet run for an interesting transition in the kitchen. This option is shown with a MWEP30 on the exposed side of the ND (no door) cabinet to mimic a finished door.

Using ND Base Cabinets

Use only one adjustable shelf in a B24ND or wider in your laundry room to allow space to store laundry baskets.

Base Filler Pull outs

If placing next to a wall - Must use BP1.5 or BP3 between wall and pull out.

Base Cabinets Design Tips

Designing Around a Range

Make sure to give landing space on each side of a cooking appliance when placing in design.

Clearance for Roll Out Trays

Be sure to leave enough clearance for doors to open at least 90 degrees. This will allow the roll out trays to be operated correctly.

Blind Cabinets with Drawers

When placing a blind base cabinet, cabinet with drawer or trash pull out, make sure to allow enough clearance so drawer/pull out will open fully.

Make sure to leave enough space to allow drawer to open if placing around corner from range or appliance.

Using a Sink Front Angle

For sufficient dishwasher door clearance and loading/unloading space, a 15" wide base cabinet is recommended for use between a corner sink base and dishwasher.

Built-in Microwave Base Modification

This assembly requires a drawer base, either 24" or 30" wide - depending on the size of the built in microwave you purchase separately.

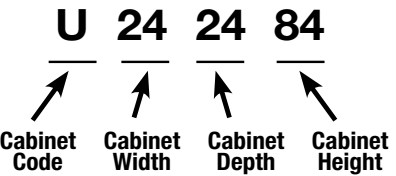

Assembly requires the onsite removal of the top two drawers from the cabinet. Consult the manufacturer specifications for cut out dimensions, as additional modification may be required.

Depending on the cut out dimensions the use of a filler (FS30), to fill the gap between the bottom of the microwave and the drawer. Consult the manufacturer specifications for proper support and possible use of a trim kit\*.

\*Trim kit and microwave will be purchased independently from supplier of your choice.

The Universal Oven cabinet will need to be modified on the job site to fit your specific appliance. By removing the drawers and stiles between the drawers you can achieve an opening height between 21" and 60", and a maximum width of 30". The height of the upper doors will not be affected with these modifications. Your appliance size and the amount of modification required will determine if the drawers will be able to be used. In some instances, the top drawer may be dropped to the bottom position, thus allowing a drawer to remain. Installation and modification of the cabinet is completed on your job site, not in the factory. Support for the appliance is not supplied by the cabinet company and will need to be determined based on appliance manufacture requirement.

Tall Cabinets Design Tips

Decorative Ends for Tall Cabinets

For decorative ends on a tall 24" deep cabinet use a CFOU and a tall skin.

Clearance for Roll Out Trays

Make sure to leave enough clearance for door to open at least 90 degrees when placing next to wall or refrigerator cabinet.

Customizing the Depth of a Tall Cabinet

Customize the depth of a 24" wide utility cabinet (U242484, U242490, or U242496) down to 12" and use it facing out next to a refrigerator or another utility cabinet for shallow food storage, storing brooms/mops, or create a hidden message center.

Customizing the Depth of a Tall Cabinet

A narrow alcove in your kitchen or a pantry like storage area can be transformed into an entire wall of open and closed storage by using a combination of ND and Standard Utility cabinets with a reduced depth.

Customizing the Depth of a Tall Cabinet

Customize the depth of a 24" wide Utility cabinet with no doors (U242484ND, U242490ND, or U242496ND) down to 12" and use it facing out next to a refrigerator or another utility cabinet for open storage and an interesting transition in the kitchen.
