

## Caring for Your Hammered Steel Product

With proper care and attention your new Hammered Steel cookware rack will continue to look great for years to come. There are a few, simple care points we ask you to read and follow:

- The Hammered Steel of your rack is coated with an industrial acrylic finish which provides protection in normal kitchen or household use.
- However, this finish is *not effective in outdoor use or in areas where heavy or continuous steam or moisture is present*. These placements can cause the rack to rust and must be avoided.
- Your rack is easy to keep clean if maintained periodically so dust and debris does not accumulate thickly.
- The acrylic finish cleans easily with a damp cloth. But please be sure to dry all surfaces *thoroughly* after cleaning to prevent any possibility of rust.
- *Do not use steel wool or other abrasive pads or cleaners* on your Hammered Steel rack. These products will injure its acrylic finish and hamper maintenance of its appearance.
- Should your rack be scratched or if a bit of its acrylic finish is removed, you may touch up the injury with “Pledge®” or a similar commercial wax-like product.

That’s all you need to know to keep your rack looking as good as new. Enjoy!
