

# PUPPY GUARD

PATENT PENDING

## Simple Installation Instructions

### Included In Box:

- 2 – 3' Puppy Guard Panels (if purchased)
- 2 – 3' Puppy Guard Strips (if purchased)
- #8 x 1/2" Self-Taping Screws

### Needed For Installation:

- Power Drill w/ #1 Phillips Screw Bit
- (Optional) Jigsaw for Trimming

**Flush Bottom  
Panel Style**

**Picket Bottom  
Panel Style**

### Step 1

Insert 3' section of Puppy Guard to yard side of your installed fence section as shown in **Figure 1**. Bottom pickets on Puppy Guard should rest on bottom horizontal rail of installed fence section. Horizontal rail ends on Puppy Guard should meet at center of center vertical picket on installed fence section. Attach using 4 - #8 x 1/2" self tapping screws.

**Screw Placement**

**Figure 1**

### Step 2

Insert second 3' section of Puppy Guard opposite installed section of Puppy Guard as shown in **Figure 2**. Bottom pickets on Puppy Guard should also rest on bottom horizontal rail of installed fence section as instructed in step 1. **Make sure horizontal rails ends on both sections of Puppy Guard meet on center of vertical picket on installed fence section before attaching.** Attach using 4 - #8 x 1/2" self tapping screws.

## Simple Installation Instructions

### Step 3

This step is only required when Picket Bottom Style Fence is installed in your yard. Install Puppy Guard Strip (sold separately) at bottom of extended pickets of installed fence as shown in **Figure 3**. Strip should be located between bottom of horizontal rail and bottom of pickets of your installed fence section as shown. Attach using 2 - #8 x 1/2" self tapping screws.

Screw Placement

**Figure 3**

### Step 4

Install second Puppy Guard Strip opposite first installed Puppy Guard Strip as shown in **Figure 4**. Make sure ends of Puppy Guard Strips meet on center of vertical picket on installed fence section. Attach using 2 - #8 x 1/2" self tapping screws.

**Figure 5** Below shows how Puppy Guard can rack to installed fence by adjusting rails.
