

## **INSTALLATION GUIDE**

The following information is for the tile installation overview process. It is not a step-by-step instruction, each installation will vary depending on the materials and design. Please follow the instructions provided by the manufacturers.

### **SURFACE**

The installation surface should be clean, sound, solid, and flat.

### **LAYOUT**

Plan the layout of the tile you purchase and the placement on the wall/floor before installation to minimize cuts to your tiles.

### **CUTTING**

Use a tile cutter, tile nippers, or a wet saw with a diamond blade to cut through the tiles if needed. Wearing protective gear is a must.

### **THIN-SET**

Follow the instructions provided by the manufacturer to select the correct type of adhesive. A white thin-set is recommended. Use the notched trowel to apply the thin-set and Use spacers to create a uniform grout line.

### **GROUT**

Recommended use non-sanded grout for all kinds of mosaic tile and glass tile. However, Sanded grout should be depending on the tile you are installing. Natural stone should be sealed with a high-quality sealer after being grouted. Follow the instructions provided by the grout/sealer manufacturer for the best results.
