Joists

ProWood Ground Contact is our most widely used, general purpose treated lumber. It can be used for above ground, on the ground, in the ground, and for freshwater application. Primary uses are areas that will experience frequent or prolonged moisture and for items critical to the integrity of the structure, such as beams, joists and stringers.

Critical Structure (UC4B)

Lifetime Limited Warranty

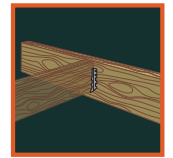

Timber Posts*

Beams

Ledger

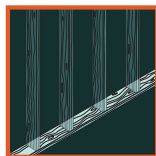

Joists

For the toughest jobs, ProWood Critical Structure gets the call. It's made to withstand the harshest conditions and can be used for critical structure, ground contact, and saltwater splash applications. The go-to choice for supporting permanent structures.

Borate

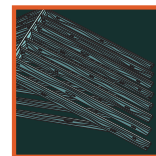

Lifetime Limited Warranty

Borate Sill Plate

Borate Studs

Borate Rafters

ProWood Borate is designed for interior use. It's treated lumber that is compatible with the same fasteners used for untreated wood, but still offers protection against rot and termites. It's great for sill plates, studs, and rafters.

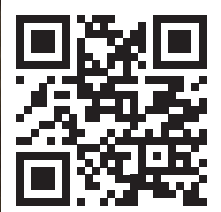

* Products available in different treatment retentions - refer to end tag for proper application.
