TROUBLESHOOTING

The washer is equipped with an automatic error-monitoring system to detect and diagnose problems at an early stage. If the washer does not function properly or does not function at all, check the following before you call for service.

Before Calling for Service

Error Messages

Problem	Possible Cause & Solution
UE	The load is too small.
UNBALANCE ERROR	Add additional items to allow the washer to balance the load.
	Heavy articles are mixed with lighter items.
	Always try to wash articles of somewhat similar weight to allow the washer to evenly distribute the weight of the load for spinning.
	The load is out of balance.
	Manually redistribute the load if articles have become tangled, preventing the automatic rebalancing from working properly.
I E	Water supply faucets are not fully open.
INLET ERROR	Make sure that the water faucets are fully open.
	Water inlet hoses are kinked, pinched, or crushed.
	Make sure that the hoses are not kinked, pinched or crushed behind or under the washer. Be careful when moving the washer during cleaning or maintenance.
	Water inlet filters are clogged.
	Clean the inlet filters. See MAINTENANCE.
	Water supply pressure to faucet or house is too low.
	Check another faucet in the house to make sure that household water pressure is adequate and flow is not restricted.
	Disconnect the water inlet hoses from the washer and run a few gallons of water through the hoses to flush out any dirt.
	If flow is too low, contact a plumber to have the water supply lines repaired.
	Water supply connected with leak-limiting hoses.
	The use of hoses designed to limit leaks is not recommended. Leak-limiting hoses can trip falsely and prevent the washer from filling.
DE	Drain hose is kinked, pinched, or clogged.
WATER OUTLET ERROR	Make sure that the drain hose is free of clogs or kinks and is not pinched behind or under the washer.
	The end of the drain hose is more than 96 inches (2.4 m) above the bottom of the washer.
	• Move the end of the drain hose so that it is lower than 96 inches (2.4 m) .
CONTROL LOCK	The control lock function is on to prevent anyone from changing cycles or operating the washer.
FUNCTION	Turn off the control lock function in the control panel. See Control Lock under Options and Extra Functions.

DRAIN FEATURE Special drain feature If the washer is paused during a cycle for more than 4 minutes, the cycle will be canceled and any water remaining in the tub will be drained. This is not an error code. It indicates that the drain function is operating.	Problem	Possible Cause & Solution
and any water remaining in the tub will be drained. This is not an error code. It indicates that the drain function is operating. dE LID ERROR Close the lid properly. If the lid is closed and this error message is still displayed, call for service. dL LID LOCK ERROR LID LOCK ERROR Make sure that the lid is closed properly and press the Start/Pause button. You can hear the locking sound to lock the lid in the beginning of the cycle. The washer will not operate unless the lid is locked. Make sure that nothing is caught under the lid, including shipping material or clothing. Make sure that the latch mechanism is fully retracted. Make sure that the latch mechanism is fully retracted. If the lid is closed and this error message is still displayed, call for service. FOREIGN OBJECT ERROR FOREIGN OBJECT ERROR To lid he lid is closed and this error message is still displayed, call for service. Foreign objects such as coins, pins, clips, etc., are caught between the pulsator and the insert tub. Turn the washer off then on again. Press the Spin button without selecting a cycle to drain and spin the load. When the Spin cycle is completed, empty the tub and find and remove any objects caught in the pulsator. Always check pockets, etc., before washing to prevent error codes or damage to the washer or clothing. Lis is time to run the Tub Clean cycle. This is not an error code. It indicates that the Tub Clean cycle is running or needs to be run to clean the washer tub. For some models, be is displayed first, then the L is displayed. Lib	dr	Special drain feature
Lid is not closed properly.	DRAIN FEATURE	
LID ERROR - Close the lid properly If the lid is closed and this error message is still displayed, call for service. LID LOCK ERROR - Lid is not locked properly Wake sure that the lid is closed properly and press the Start/Pause button. You can hear the locking sound to lock the lid in the beginning of the cycle. Noises

Problem	Possible Cause & Solution
Clicking	Lid lock sounds when the lid locks or unlocks.
	Normal operation
Spraying or hissing	Water spraying or circulating during the cycle
	Normal operation
Humming or Gurgling	Drain pump is pumping water from the washer at times during a cycle.
	Normal operation
Water sloshing	A liquid in the balance ring around the pulsator helps the basket spin smoothly.
	Normal operation
Water being added	The washer adapts to the load size and type to add more water to the cycle as needed.
after the washer has already begun to	Normal operation
operate	The wash load may be unbalanced. If the washer senses that the load is unbalanced, it will stop and refill to redistribute the load.
	Normal operation
	The washer may be diluting laundry additives to add to the wash load.
	Normal operation
Rattling and	Foreign objects, such as keys, coins, or safety pins may be in tub or pump.
clanking noise	Stop the washer, check the tub and the drain filter for foreign objects.
	If noise continues after the washer is restarted, call for service.
Thumping sound	Heavy wash loads may produce a thumping sound.
	• This is normal, but if the sound continues, the washer is probably out of balance. Stop and redistribute wash load.
	Wash load may be out of balance.
	Pause the cycle and redistribute the load after the lid unlocks.
Vibrating noise	Packaging materials were not removed.
	See Unpacking and Removing Shipping Material in INSTALLATION.
	Wash load may be unevenly distributed in the tub.Wash load may be unevenly distributed in the tub.
	Pause the cycle and redistribute the load after the lid unlocks.
	Not all leveling feet are resting firmly and evenly on the floor.
	See Leveling the Washer in INSTALLATION.
	Floor is not rigid enough.
	Make sure that the floor is solid and does not flex. See Flooring in INSTALLATION.
Squeaking noise	Packaging materials were not removed.
	See Unpacking and Removing shipping Material in INSTALLATION.
Banging noise when	Plumbing in the home moves or flexes when the water valves in the washer shut off.
the washer is filling with water.(Water hammer)	Water hammer is not caused by a defect in the washer. Install water hammer arrestors (purchased separately at hardware or home improvement store) between the fill hose and the washer for best results.
	Household water supply pressure is very high.
	Adjust household water supply regulator to a lower pressure or contact a plumber.
L	<u> </u>

Operation

Problem	Possible Cause & Solution
Water Leaking	Hoses are not connected correctly.
	Check hoses and connectors for leaks, cracks, and splits.
	Check and tighten hose connections.
	House drain pipes are clogged.
	The washer pumps out water very rapidly. Check for water backing up out of the drain pipe during drain. If water is seen coming out of the drain, check for proper drain hose installation and check for restrictions in the drain.
	Contact a plumber to repair drain pipe.
	Drain hose has come out of the drain connector or is not inserted far enough.
	Tie drain hose to inlet hose or standpipe to prevent it from coming out during drain.
	• For smaller drain pipes, insert the drain hose into the pipe as far as the drain hose flange. For larger drain pipes, insert the drain hose into the pipe 1 - 2 inches past the flange.
	A large item such as a pillow or blanket is above the top of the tub.
	• Use the Bedding cycle for large or bulky items. Use extra care and never wash more than half a load of items that float, such as pillows.
	• Stop the washer and check the load. Make sure that the load does not crest above the top edge of the tub.
	Oversudsing of detergent
	Oversudsing may create leaks, and may be caused by the type and amount of detergent used. HE (High-Efficiency) detergent is the only detergent recommended. The normal amount of detergent to use is 1/4 to 1/2 of the maximum amount recommended by the detergent manufacturer.
	Always reduce the amount of detergent if the load is small or lightly soiled, or if the water is very soft.
	Never use more than the maximum amount recommended by the detergent manufacturer.
Excessive sudsing	Too much detergent or incorrect detergent
	HE detergents are formulated specifically for HE (High-Efficiency) washers and contain suds reducing agents. Only use detergent with the HE (High-Efficiency) logo.
	• For detergent quantities refer to Detergent Use in OPERATION . If sudsing or detergent residue continues to be an issue, add an extra rinse.
Washer will not turn	Power cord is not properly plugged in.
on.	Make sure that the plug is plugged securely into a grounded, 3-prong, 120-VAC, 60 Hz outlet.
	House fuse is blown, circuit breaker has tripped, or power outage has occurred.
	Reset circuit breaker or replace fuse. Do not increase fuse capacity. If the problem is a circuit overload, have it corrected by a qualified election.
Wash cycle time is longer than usual.	The washer automatically adjusts the wash time for the amount of laundry, water pressure and other operating conditions.
	This is normal. The washer adjusts cycle time automatically to provide optimal results for the selected cycle. The time remaining shown in the display is only an estimate. Actual time may vary.

· Check house circuit breakers/fuses. Replace fuses or reset breaker. The washer should be

• Press the **Power** button then reselect the desired cycle and press the **Start/Pause** button. If the Start/Pause button is not pressed within a certain time, the washer will be turned off. (The time varies by model, from 4 to 60 minutes.)

Extremely low water pressure.

• Check another faucet in the house to make sure that household water pressure is adequate.

Washer is too cold.

· If the washer has been exposed to temperatures below freezing for an extended period of time, allow it to warm up before pressing the **Power** button. Otherwise, the display will not come on.

Problem	Possible Cause & Solution
Washer is not filling	Filter is clogged.
properly.	Make sure that inlet filters on the fill valves are not clogged. Refer to Cleaning the Water Inlet Filters in MAINTENANCE.
	Inlet hoses may be kinked.
	Check that inlet hoses are not kinked or clogged.
	Energy efficiency
	This is a High-Efficiency (HE) washer. As a result, the water level settings for this washer may be different than for conventional washer.
	Insufficient water supply
	Make sure that both hot and cold water faucets are turned on all the way.
	Washer lid is open.
	Close the lid and make sure that nothing is caught under the lid preventing it from closing completely.
	Water level is too low.
	The water will not normally cover the clothes. The fill level is optimized for the wash motion to achieve the best wash performance.
Water in the washer	Drain hose is kinked, pinched, or clogged.
does not drain or drains slowly.	Make sure that the drain hose is free of clogs or kinks and is not pinched behind or under the washer.
	The end of the drain hose is more than 96 inches (2.4 m) above the bottom of the washer.
	Move the end of the drain hose so that it is lower than 96 inches (2.4 m).
Bleach does not	Bleach dispenser cover is not properly installed (on some models).
dispense.	Make sure that the bleach cover is properly installed and snapped into place before the beginning of the cycle.
	Bleach dispenser is dirty or clogged.
	Lift out the bleach dispenser cover and clean out the reservoir. Lint and other foreign debris that are collected inside the dispenser may prevent proper dispensing of the bleach.
Premature	Bleach dispenser filled for future load.
dispensing of bleach	You cannot store bleach in the dispenser for future use. The bleach will be dispensed every load.
	Overfilling the bleach dispenser
	Overfilling the bleach dispenser will cause the bleach to dispense immediately, which will damage the laundry or the washer. Always measure bleach, but never fill above the max line on the dispenser. A half cup of bleach is sufficient for most loads. Never use more than 1 cup of bleach.

Performance

Wrinkling Washer is not unloaded promptly. Always remove items from the washer as soon as the cycle is complete. Washer is overloaded. The washer can be fully loaded, but the tub should not be tightly packed with items. of the washer should close easily. Hot and cold water inlet hoses are reversed. Hot water rinse can set wrinkles in garments. Check the Inlet hose connectors.	he lid
