

The [SpeedClean MSB-KIT](#), also known as the [Mini Split Bib Kit](#), is a tool designed to simplify the cleaning of mini-split air conditioner systems. It works by creating a catch basin that directs cleaning solution and water into a 5-gallon bucket, preventing overspray and damage to surrounding areas. The kit includes a bib, brackets, adhesive wrap, and deflector plates for protection.

Here's a breakdown of the instructions:

1. 1. Preparation:

- Turn off the main power to the mini-split unit.
- Remove the unit's cover and protect any exposed electronics with the included adhesive wrap.
- Attach the brackets to the sides of the unit, ensuring they are securely in place.
- Install the deflector plates to further protect surrounding areas from overspray.
- Attach the bib to the brackets, creating a funnel-like shape.

2. 2. Cleaning:

- Position the end of the bib's drain hose into the 5-gallon bucket.
- Use your preferred cleaning method, such as a pump sprayer or the [CoiUet portable coil cleaning system](#), to apply coil cleaner and water.
- The bib will collect the cleaning solution and any debris, channeling it into the bucket.

3. 3. Finishing:

- Once cleaning is complete, disconnect the bib and remove the brackets.
- Dispose of the cleaning solution and debris from the bucket.
- Clean the bib and other components of the kit as needed.
- The kit is designed to be compact and easily stored in the 5-gallon bucket for convenient transport.
