Pavers – Frequently Asked Questions (FAQ)

1. Quantity & Coverage

Q: How many pavers do I need for my project?
A: Calculate the total area (length × width) you want to cover, then divide by the coverage area of one paver. Product pages often include coverage calculators or charts to help you estimate.

Q: How many pavers come in a pallet, box, or case?
A: The quantity per pallet, box, or case is listed on the product page within the product highlights or product specifications. If you're unsure, ask your retailer for the exact count.

Q: How much area (square feet) does a pallet cover?
A: This depends on the size of each paver and the total number in the pallet. Product specifications or your retailer can provide this information.

---

2. Purchasing Options

Q: Can I buy individual pieces, or do I have to buy a full pallet?
A: Some stores offer individual pieces, while others require pallet purchases. Check with your local retailer for their policy.

Q: What is the price per piece or per pallet?
A: Prices vary by size, material, and region. Check the product page or ask your retailer for current pricing.

Q: Can I buy less than a pallet or in smaller quantities?
A: Availability of smaller quantities depends on the retailer. Some allow partial orders or individual purchases. Please check "Product Details" for mention of individual SKU purchase options.

---

3. Installation & Application

Q: How do I install pavers (on dirt, sand, gravel, or concrete)?
A: Installation typically involves preparing a level base (sand or gravel), placing the pavers, and securing them with sand or adhesive as needed. For concrete bases, thin-set mortar or adhesive may be recommended.

Q: Do I need a base (sand, gravel, concrete) or mortar?
A: A compacted base of sand or gravel is recommended for stability. Mortar or adhesive may be used for permanent installations or special applications.

Q: Can these be used for driveways, patios, walkways, or other specific applications?
A: Many pavers are suitable for patios, walkways, and driveways (if rated for vehicle loads). Always check product specs for suitability.

Q: Can these be cut, trimmed, or shaped for custom fits?
A: Most pavers can be cut with a masonry saw or chisel to fit corners, curves, or custom spaces.

---

4. Product Features & Specifications

Q: What are the dimensions, weight, or color options?
A: Dimensions and weight are listed on the product page. Color options are available for select SKUs. Please review the Product Page for possible color options.

Q: Are these pavers permeable, fire-resistant, or suitable for certain climates?
A: Some pavers are designed to be permeable for water drainage, while others are solid. Many are weather-resistant and some are rated as fire-resistant—check product details for specifics.

Q: Are they durable, slip-resistant, or suitable for heavy loads?
A: Pavers are generally durable and weather-resistant. Some are slip-resistant or rated for vehicle traffic—check product specs for details.

---

5. Compatibility & Accessories

Q: Are there matching caps, edge pieces, or other accessories?
A: Yes, many systems offer matching caps, edge pieces, and other accessories. Ask your retailer for compatible options.

Q: Can these be used with other materials or products (e.g., Brock paver base, polymeric sand)?
A: Pavers can often be combined with other landscaping materials and accessories. Always check compatibility for your specific application.

---

6. Maintenance & Durability

Q: Do these need to be sealed? How do I clean or maintain them?
A: Sealing is optional but can help protect against stains and weather. Clean pavers with mild soap and water or a pressure washer as needed.

Q: Will they fade, stain, or withstand harsh weather?
A: Most pavers are designed to resist fading and staining, but sealing can provide extra protection. Check product details for weather resistance.

---

7. Other Common Questions

Q: Are these pavers suitable for cold climates or freeze-thaw conditions?
A: Many pavers are rated for freeze-thaw durability. Check product specifications for suitability in your climate.

Q: What is the load-bearing capacity or PSI rating?
A: Load ratings and PSI are listed in product specs. Choose pavers rated for your intended use (e.g., driveways, patios).

Q: Can these be used indoors or for special applications (e.g., shower, kitchen)?
A: Some pavers are suitable for indoor use or special applications. Check manufacturer recommendations.

Q: Are there matching accessories, caps, or edge pieces?
A: Yes, many systems offer matching accessories. Ask your retailer for compatible options.
