Maintenance and Cleaning for the Wooden Slat Acoustic Panel

Product

Wooden Slat Acoustic Panel.
Wooden slat panel mounted on a polyester felt.

Wood slat
MDF with veneer

1. For the cleaning of the panel, you can use a rag to clean the surface of the veneer and a vacuum cleaner to clean the backing polyester felt.

2. Maintenance of the panel:
   -We recommend that the panel is installed in a dry area.
   -Areas with prolonged humid/damp environments can affect the slats. The core consists of MDF, which could potentially swell if exposed to water.
   -The panel is designed for indoor use. The materials that the panel are manufactured with are not fit for outdoor spaces and will retain moisture in an area like a bathroom with a shower unit.
   -The PET backing is made from recycled plastics but is a fibrous, porous material that will could hold water and cause molding behind the install when placed in high-humidity or high-moisture areas. We highly recommend against it.
