

# Use and Care Manual

## 1. Product Overview

This is a 2.5W solar-powered bird bath fountain, coming in a 2-pack. It is equipped with 6 nozzles, with a diameter of 6.7 inches. It is suitable for bird baths, gardens, ponds, pools, fish tanks, outdoors and aquariums to circulate water and add fun.

## 2. How to Use

- 

Place the solar fountain in direct sunlight. It will start spraying water automatically once exposed to sufficient sunlight. The more sunlight it gets, the better the spraying effect.

- 
- 

Replace the 6 different nozzles to get different spray shapes and heights. The spray height can reach 15-27 inches, and replacing nozzles can also avoid water splashing out of the basin.

- 
- 

The suction cups at the bottom of the fountain can fix it firmly, preventing it from floating randomly in the bird bath or other containers.

- 
- 

No complicated installation or additional power supply is required.

- 

## 3. Care and Maintenance

-

Ensure the basin is filled with enough water so that the pump is completely submerged underwater when in use.

- 
- 

Clean the pump regularly to prevent clogging caused by dust or debris.

- 
- 

Keep the solar panel clean. Shading from leaves, stains or other objects will affect solar energy conversion efficiency.

- 
- 

The fountain does not store energy, so it will stop working at night, which helps extend its service life.
