

Floating Shelves Installation Guide

This guide is for the 6-piece floating shelves (16.5"W x 6"D x 0.6"H), suitable for wall mounting in bathrooms, bedrooms, living rooms, nurseries, and offices. Follow these steps for safe and stable installation.

Tools & Parts Included

- 6 wooden floating shelves
- 12 L-shaped metal brackets (max load 40Lb)
- Mounting screws (matching brackets)
- Anchors (for drywall installation)

Installation Steps

1. **Mark Position:** Use a level to mark the desired installation height on the wall. Ensure marks are straight and aligned (for multiple shelves, keep equal spacing for a neat look).
2. **Install Anchors (if needed):** If mounting on drywall, drill holes at the marked positions, insert anchors, and tap them flush with the wall. For brick/concrete walls, skip anchors and drill directly into the wall.
3. **Fix Brackets:** Align the L-shaped brackets with the marks, drill screws through the bracket holes into the anchors/wall. Tighten screws firmly to ensure brackets are stable and not loose.
4. **Mount Shelves:** Place the wooden shelves on the installed brackets, adjust to ensure they are level. Press gently to confirm stability—no wobbling means successful installation.

Notes

- Do not exceed the 40Lb load capacity per shelf to avoid falling.
- Choose a smooth, flat wall surface for installation; avoid uneven or fragile walls.
- Each shelf has a unique natural wood grain, which is normal and not a defect.
- For safety, install shelves away from children's reach if placing heavy items.
