

CURB EDGING

FREQUENTLY ASKED QUESTIONS

How flexible is the EcoBorder Curb?

It can bend up to 70 degrees from end to end, allowing smooth curves in your landscape design. For sharper bends or 90-degree angles, users often cut along the scored/relief lines with a coarse-tooth hand or miter saw.

Is it lawn mower safe?

Yes — it features a lawn mower safe edge that you can drive right up to or run mower wheels over without damage to the edging or mower.

Is it durable and weather-resistant?

Yes — it's designed to withstand the elements, including freeze-thaw cycles, UV exposure, and extreme weather.

Does it stop weeds or grass from spreading?

It provides good separation between areas (e.g., lawn vs. mulch bed) and helps contain mulch or gravel. However, like most surface-level edging, it may not completely block deep-rooted grass or aggressive roots from growing underneath over time.

How much does it weigh, and is it easy to move/reposition?

Each 4-ft piece weighs about 12–14 lbs, making it heavier and more stable than lighter models but still manageable for most DIYers. It's easier to reposition than concrete or stone alternatives.

What are the main advantages over traditional edging?

- Eco-friendly (recycled materials)
- Easy, no-dig installation saves time and effort
- Flexible for curves
- Mower-friendly edge
- Durable, long-lasting, and low-maintenance
- Attractive premium look without the cost/heaviness of masonry

How do I clean or maintain it?

Clean with water and mild soap if dirty. Periodically check stakes for security and replenish mulch as needed.
