

SingleShot PLUS Wall & Ceiling Texture Instructions

1. Always keep nozzle pointed away from face.
2. The use of personal protective equipment is required.
3. Shake can vigorously for 10-15 seconds. This product works best when used at or above room temperature 75° F (24° C).
4. The adjustable nozzle allows for infinite adjustability. Simply twist the nozzle clockwise for knockdown and counterclockwise for orange peel.
5. Holding the can upright approximately 30-34 inches from the wall/ceiling, depress the nozzle to begin spraying. Test "SingleShot PLUS Wall & Ceiling" in an inconspicuous spot to make sure you have achieved the desired pattern. If the flow decreases, repeat step 3. Spray using a circular motion to disperse evenly. Overlap the spray onto the existing texture to help blend in. A second coat may be applied for a heavier texture.
6. Drying times will differ depending on the surface, heaviness of texture, climate, etc. Paint when completely dry with your choice of paint. For better results, prime area before painting.
7. Coverage will vary depending on the pattern applied.
8. When finished applying texture, purge the inner tube by flipping the can upside down and pressing down on the nozzle.
