WATERPROOF ACCESSORIES

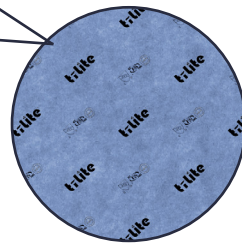

- 1** WP Seam Tape
- 2** WP Membrane
- 3** WP External Corner
- 4** WP Internal Corner
- 5** WP Mixing/Pipe Valve Seal

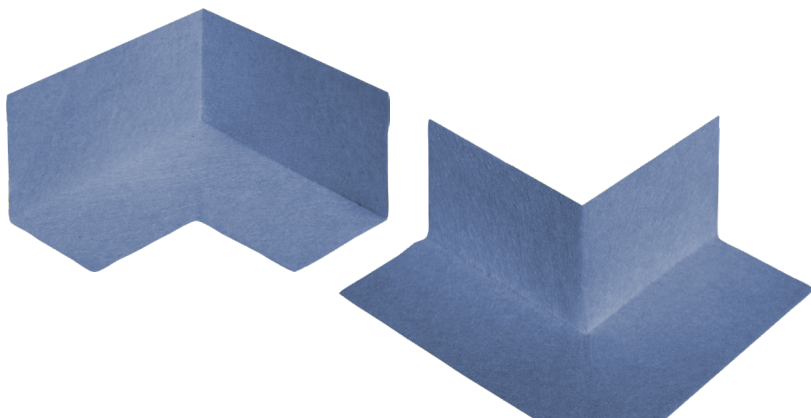

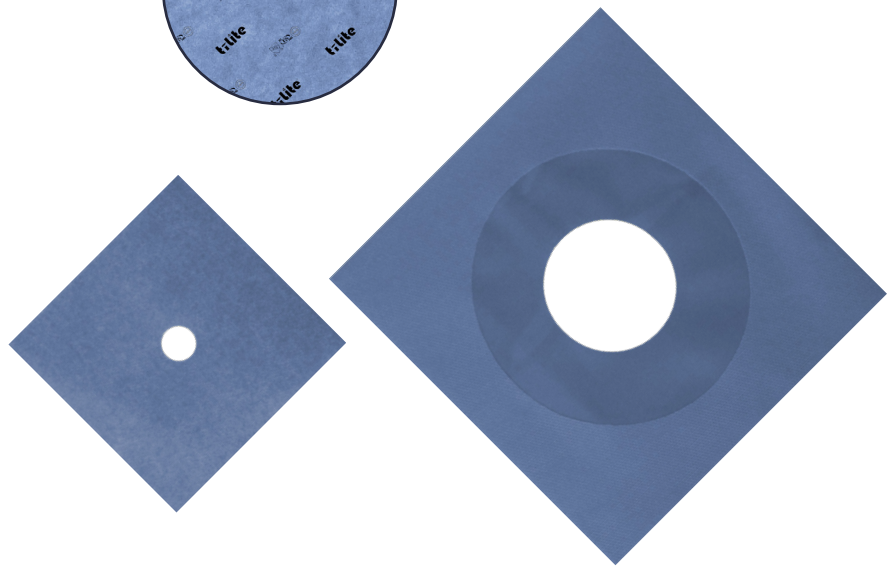

WP Membrane is a lightweight, polyethylene membrane for use under tile and stone surfaces in showers and wet area applications. It is also suitable for chemical resistant flooring.

WP Seam Tape is made from the same lightweight, waterproof material as the WP Membrane and is for use over horizontal and vertical seams.

WP Mixing/Pipe Valve Seals are designed to seal pipe protrusions and are for use around supply lines to shower heads, hand held wands, jets, and spray and steam heads. They act as an anti-fracture membrane between substrates and hard surface coverings.

WP Internal/External Corners are constructed as a single piece from a seamless material that eliminates the potential weak points in time consuming jobsite cutting techniques. They offer convenience and provide peace of mind knowing every corner is safe from water infiltration.
