Application Instructions

Surface Preparation: Surface must be free from grease and other residues, dry, smooth and structurally sound. Check surfaces for loose wallcoverings. Repair all unsound surfaces. Before proceeding with any unusual conditions, consult your adhesive or wallcovering supplier. To check for poor quality latex paint, cut an "x" in the wall and apply clear tape over it. Remove quickly; if there is paint on the tape, it is of poor quality.

Dilution: Do not dilute.

Application Method: Use only when the room temperature is between 60ºF and 80ºF. Apply an even coat, covering the entire surface of the wallcovering.

Clean-Up: Before the adhesive dries, remove any excess with warm, clean water. Additional effort may be required if the adhesive is allowed to contact the surface of embossed or textured vinyls. Adhesive may be difficult to remove after it has dried.
