

# Care Instructions

## Sansevieria Cylindrica Braid

- **Botanical name:** Sansevieria Cylindrica
- **Light:** Full Sun
- **Water:** Water when dry. Can handle periods of drought. Water less frequently in winter months
- **Fertilizer:** Fertilize with a half-strength general fertilizer once a month, if desired
- **General Care and Transplanting:** New shoots will appear and grow in an upright or fan shape. Divide plants when several new shoots appear. If you don't want to divide the plants, pinch off the new shoots to prevent growth. Transplant every 1-2 years; however, can be left in current pot and will survive rootbound.
