## MAINTENANCE

---

- The Moldboard should (after initial "scouring") be kept in a smooth, polished condition. Fine sandpaper, steel wool, kerosene, naphtha, etc. may be used to restore the finish on a rusty Moldboard.
- The ~~Coulter Blade~~ edge should be relatively sharp. If sharpening is necessary, use a flat file.

- Every 4 hours lubricate the Coulter Hub bearing surface through the grease fitting.
- For smooth operation and to prohibit the formation of rust on the crank, keep a light coating of oil on threads.

Note: When lubricating bearing , it is recommended that you use multipurpose grease.
