

## Worm Farming FAQs

**1. How many Worms do I need for Each Product:**

- **Worm Feast:** 500 Worms
- **Worm Café:** 1000 Worms
- **Can O Worms:** 1000 worms

**2. What Type of Worms should I use:**

- Composting Worms/ Red Wrigglers/ Night Crawlers

**3. Can I use the worms from my Garden?**

- No, that's because they are not Composting Worms – they will not enjoy eating the food.

**4. Will my worm survive in the Winter:**

- The worms like plants will close up and die off over winter, but their eggs will survive. Each egg has 5-12 baby worms that will hatch in spring.
- You can move your worm farm indoors (Basement/ Laundry room)

**5. Can the Worm Café/ Can O Worms function inside the house?**

- Yes! Our worm bins have been designed to live indoors during winter – try moving into your basement/ Laundry room

**6. Does it smell!?**

- No, if you are constantly adding food and aerating a worm farm it should smell like rich dirt.

**7. How long will it take for the food to break down in the Worm Bins?**

- For Worm Bins 4-6 months
- For the Worm Feast, immediately – the worms are doing the work by coming out of the holes of the product

**8. What happens if my worm bins does start to smell?**

- Sprinkle the Worm conditioner once a week, mix this into the bin – this will help balance out the acidity in the worm bin. Perfect solution for customers.

**9. Will the Worm Bins attract rodents?**

No, if you aerate the worm bin weekly by mixing with a garden fork it will not attract animals. If you have rodent issue though, it may be best to keep your worm bin inside.

**10. I have customer interest at my Garden Centre, and want to do a workshop – can you provide the content?**

- Yes! We have step by step e-publications and videos on our website that will help educate and guide your team members through the process of worm farming.
