

Installation Guide – Wall Mounted Metal Hose Reel

Tools Required:

- Drill with appropriate drill bits
- Level
- Wrench or spanner
- Mounting hardware (anchors and screws, included)
- Pencil or marker for marking holes

Installation Steps:

1. Choose a suitable wall location near your water source. Ensure the surface is stable and can support the reel's weight when fully loaded with hose.
2. Use the reel's mounting bracket as a template to mark the positions of the screw holes on the wall with a pencil or marker.
3. Drill holes at the marked points and insert the appropriate wall anchors for your wall type (e.g., masonry, brick, or wood).
4. Align the reel's bracket with the drilled holes and secure it to the wall using the provided screws. Tighten firmly with a wrench or spanner.
5. Attach the 3.9 ft leader hose to the brass connector on the reel and then to your outdoor faucet.
6. Connect your garden hose (up to 125 ft of 5/8-inch) to the drum's center bent pipe fitting. Ensure it is securely fastened to prevent leaks.
7. Place the detachable storage basket onto the reel frame for holding tools and accessories.
8. Test the reel by pulling out and winding back the hose to confirm smooth, tangle-free operation.

Safety & Maintenance:

- Always mount the hose reel on a stable, vertical surface capable of supporting the full weight.
- Periodically check that screws and fittings remain tight and secure.
- Drain water from the hose reel before freezing conditions to prevent damage.
- Clean the reel and basket regularly to maintain smooth operation and appearance.
