

# MAXIMIZE THE PERFORMANCE AND EFFICIENCY OF YOUR COMPRESSOR AND AIR TOOL APPLICATIONS

PAIR YOUR PRODUCT WITH AN ARO® FILTER AND REGULATOR COMBINATION UNIT AND EXTEND SERVICE LIFE

### The Problem:

Often customers only purchase regulators without the proper filter for their application. As a result, contaminated air causes debris to get lodged into the products initiating them to fail faster. This requires the regulator to be replaced sooner, costing YOU more money. Purchasing an ARO combination unit and using it correctly in each application extends the life of all of your investments.

### Manufacturer Preferred

Filter-regulator or “piggybacks” combine the function of both a filter and a regulator. Piggybacks are compact and most effective when space is a constraint. Piggybacks can be modified based on application requirements.

### 2 and 3 Piece Combination Units

Combinations are typically a Filter-Regulator-Lubricator (3-piece) or a Piggyback-Lubricator (2-piece) mounted together. ARO combinations are easily assembled using modular spacer kits.

## Find Your HOME DEPOT Compressor and recommended Filter, Regulator, and Lubricator combination below:
