Deco Blooms™

Fresh • Unique • Handmade

Thank you for your purchase and for believing in us to make your special delivery. To care for your new Deco Blooms arrangement, please follow these easy care steps:

1. Water:
Every 7 days during warm seasonss, and every 10-14 days during cold seasons.
Allow the soil to drain so that the roots are not suspended in water. This will cause the roots to rot killing the plant.

2. Light & Location:
Succulents love bright sun light, but not too hot. Direct sun light can burn the suculent causing it to die.

3. Temperature:
Succulents are happiest in a dry area that is
45F to 85F / 7C to 29C

4. Fertilize:
Use a liquid fertilizer once per month. We usually dilute a standard succulent fertilizer in water so that we do not burn the plant.

Your opnion and experience matters to us: If you are not completely satisfied with your arrangement, please let us know.
