

Gazebo Care Manual

Thank you for choosing our wooden gazebo. This product combines solid wood with metal reinforcement, offering both durability and natural beauty. Proper care and regular maintenance will help extend its lifespan, maintain its structural integrity, and preserve its elegant appearance.

Material Characteristics

Wood: Natural variations in color, grain, and minor surface imperfections are normal and add to the uniqueness of the gazebo. Wood is sensitive to moisture, sunlight, and temperature changes.

Metal Components: Powder-coated or galvanized to resist rust. However, regular cleaning and inspection are necessary to prevent corrosion.

Roofing: The galvanized steel roof provides excellent weather resistance, but drainage should always be maintained to prevent water accumulation.

Routine Cleaning

Weekly/Daily:

1. Remove leaves, dust, and bird droppings with a soft brush or damp cloth.
2. Wipe down wood surfaces with a mild soap solution and rinse with clean water.
3. Do not use harsh chemicals, bleach, or abrasive cleaners.

Monthly:

1. Inspect all wooden posts and beams for cracks, mold, or insect damage.
2. Clean the steel roof and gutters to ensure proper water drainage.

Seasonal Maintenance

► Spring:

Apply a UV-resistant wood sealant or protective oil to prevent fading and cracking.
Tighten all bolts and screws to ensure structural stability.

► Summer:

Use the canopy to reduce direct sun exposure on wood.
Inspect shade fabric for wear or fading and replace if necessary.

► Autumn:

Remove fallen leaves promptly to avoid moisture accumulation.
Reapply wood treatment if surfaces appear dry or weathered.

► Winter:

If heavy snow is expected, remove snow accumulation from the roof to avoid excess weight.
Cover the gazebo with a breathable protective cover if not in use for long periods.
